Dan Vlamis and Vlamis Software Solutions

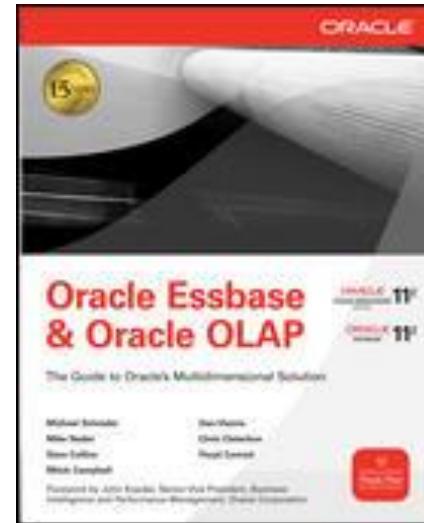

- Vlamis Software founded in 1992 in Kansas City, Missouri
- Developed more than 200 Oracle BI systems
- Specializes in ORACLE-based:
 - Data Warehousing
 - Business Intelligence
 - Design and integrated BI and DW solutions
 - Training and mentoring
- Expert presenter at major Oracle conferences
- www.vlamis.com (blog, papers, newsletters, services)
- Developer for IRI (former owners of Oracle OLAP)
- Co-author of book “Oracle Essbase & Oracle OLAP”
- Beta tester for OBIEE 11g
- Reseller for Simba and Nokia map data for OBIEE
- HOL Coordinator for BIWA Summit 2013

Oracle Essbase & Oracle OLAP: The Guide to Oracle's Multidimensional Solution

- Published by Oracle Press
 - Dan Vlamis
 - Chris Claterbos
 - Michael Nader
 - David Collins
 - Floyd Conrad
 - Mitchell Campbell
 - Michael Schrader
- Covers both Oracle Essbase and Oracle OLAP
- 500 Pages

Tim Vlamis' Bio

- 20+ years experience in business modeling and valuation, forecasting, and scenario analyses
- Trainer for Oracle University Two-Day Data Mining Course
- Professional Certified Marketer (PCM) from AMA
- Active Member of NICo (Northwestern Institute on Complex Systems)
- Adjunct Professor of Business Benedictine College
- MBA Kellogg School of Management (Northwestern)
- BA Economics Yale University

Analytical Options to Oracle Database

- Oracle OLAP
 - Defines a multi-dimensional data structure that allows information for highly complex calculations to be done quickly.
 - Fast query performance and incremental update
 - Simplified access to analytic calculations
- Oracle Advanced Analytics (Data Mining & R)
 - Refers to the process of automatically sifting through data to find hidden patterns and make predictions.
 - Series of highly advanced algorithms and procedures.
 - Extends the “R” language to the Oracle Database
- Oracle Spatial
 - Provides the capability of relating data to geo positional coordinates, objects, and constructs.
 - Allows the construction and analysis of network topologies.

Spectrum of Oracle DB BI & Analytics

OLAP

Summaries,
hierarchies and
dimensional data

“Analysis”

What is the
average
income of
mutual fund
buyers,
by region,
by year?

Data Mining & R

Knowledge discovery
of hidden patterns

“Insight & Prediction”

Who is likely to
purchase a mutual
fund in the next 6
months and why?

Spatial

Spatial relationships
between data

“Location”

Where were
mutual funds
purchased
in the last 3
years?

Competitive Advantage of BI & Analytics

Source: Competing on Analytics, by T. Davenport & J. Harris

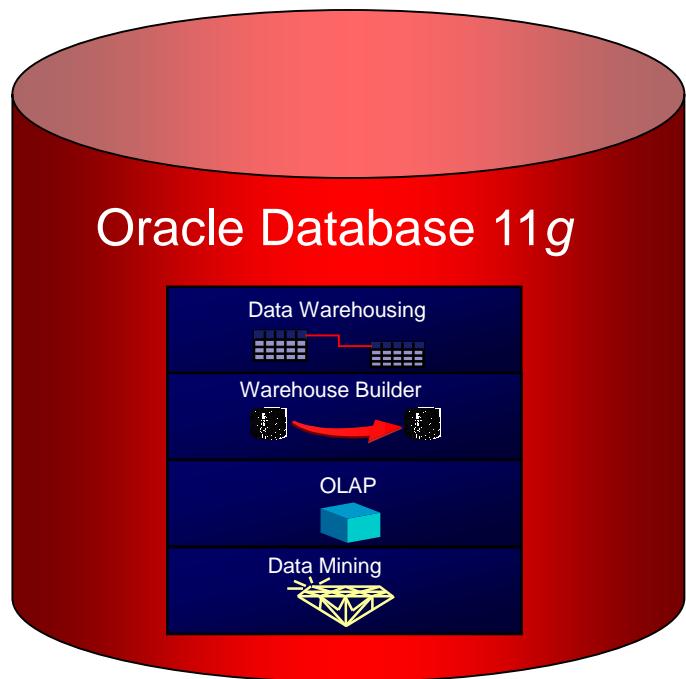

Why OLAP for BI?

- BI often presents data dimensionally
- Dimensions are natural way to look at data
 - By, across, over, time, geography, product
 - Comparison of multiple dimension values
- Multi-dimensional storage of data speeds analysis
- Natural to express dimensional comparisons
 - Share of parent
 - Compared to last year
- Allows for hierarchical dimensions with multiple levels
 - E.g. by country, drill to state, drill to city

Oracle OLAP

Leveraging Core Database Infrastructure

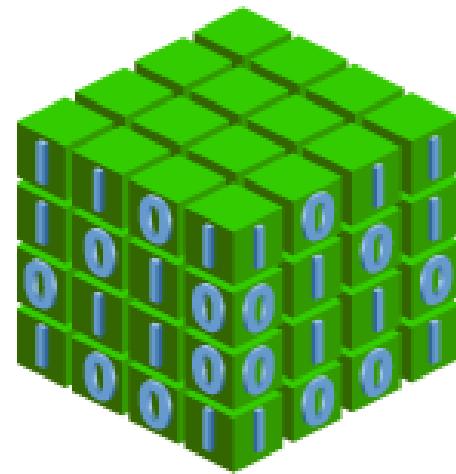

- Single RDBMS-MDBMS process
- Single data storage
- Single security model
- Single administration facility
- Grid-enabled
- Accessible by any SQL-based tool
- Embedded BI metadata
- Connects to all related Oracle data

Oracle OLAP

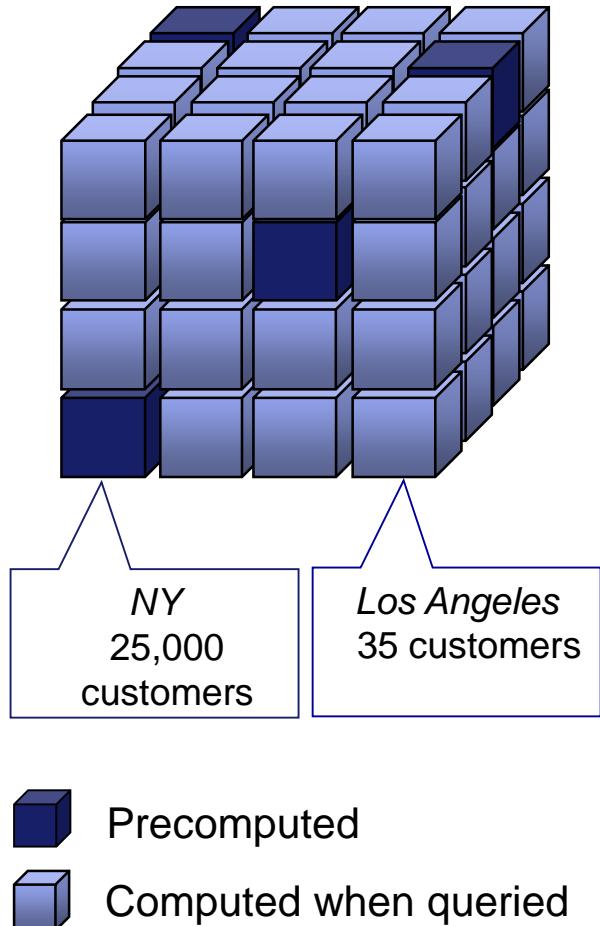

- A summary management solution for SQL based business intelligence applications
 - An alternative to table-based materialized views, offering improved query performance and fast, incremental update
- A full featured multidimensional OLAP server
 - Excellent query performance for ad-hoc / unpredictable query
 - Enhances the analytic content of Business intelligence application
 - Fast, incremental updates of data sets

Cost Based Aggregation

Pinpoint Summary Management

- Improves aggregation speed and storage consumption by pre-computing cells that are most expensive to calculate
- Easy to administer
- Simplifies SQL queries by presenting data as fully calculated

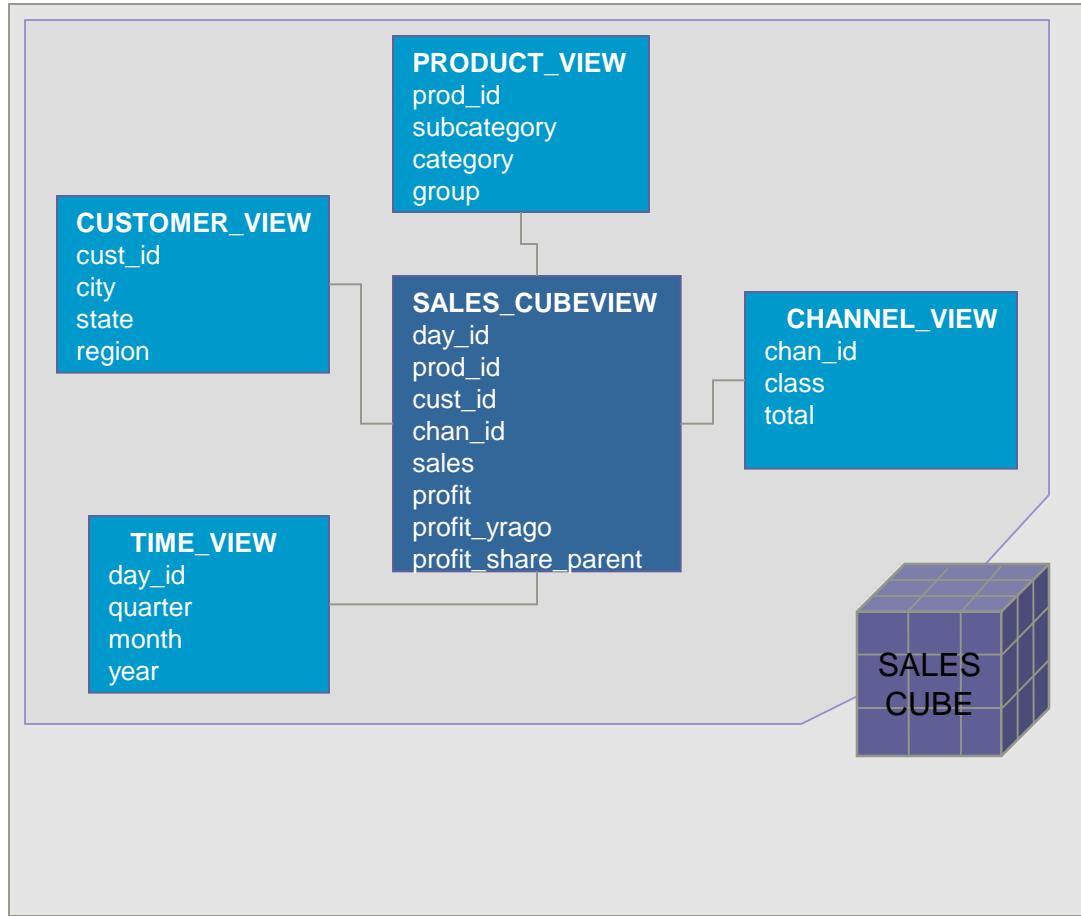

One Cube Accessed Many Ways...

- One cube can be used as
 - A summary management solution to SQL-based business intelligence applications as cube-organized materialized views
 - A analytically rich data source to SQL-based business intelligence applications as SQL cube-views
 - A full-featured multidimensional cube, servicing dimensionally oriented business intelligence applications

Cube Represented as Star Model Simplifies Access to Analytic Calculations

- Cube represented as a star schema
- Single cube view presents data as completely calculated
 - Analytic calculations presented as columns
 - Includes all summaries
- Automatically managed by OLAP

Essbase vs. Oracle OLAP

Essbase

- Separate server
- List price* \$184K/CPU
- Separate admin
- Administer by LoB
- Must build cubes
- Part of middle tier
- Excellent writeback
- Query via MDX, XML/A

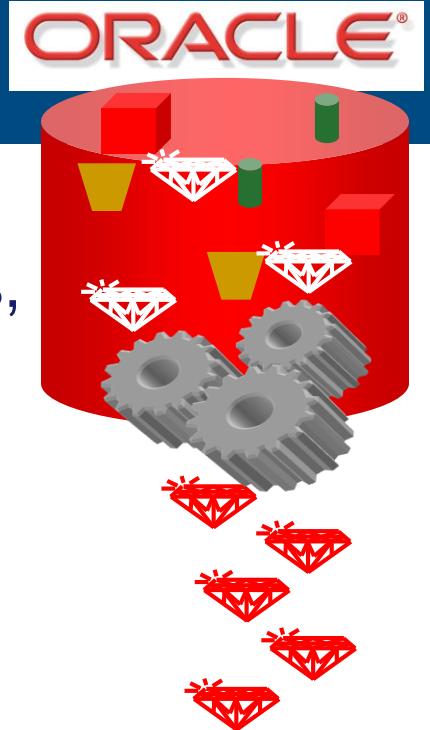

Oracle OLAP

- Built into Oracle DB
- List price* DB + \$23K/CPU
- Admin same as Oracle DB
- Administer by IT
- Must build cubes
- Part of server tier
- Limited writeback
- Query via SQL (now MDX)

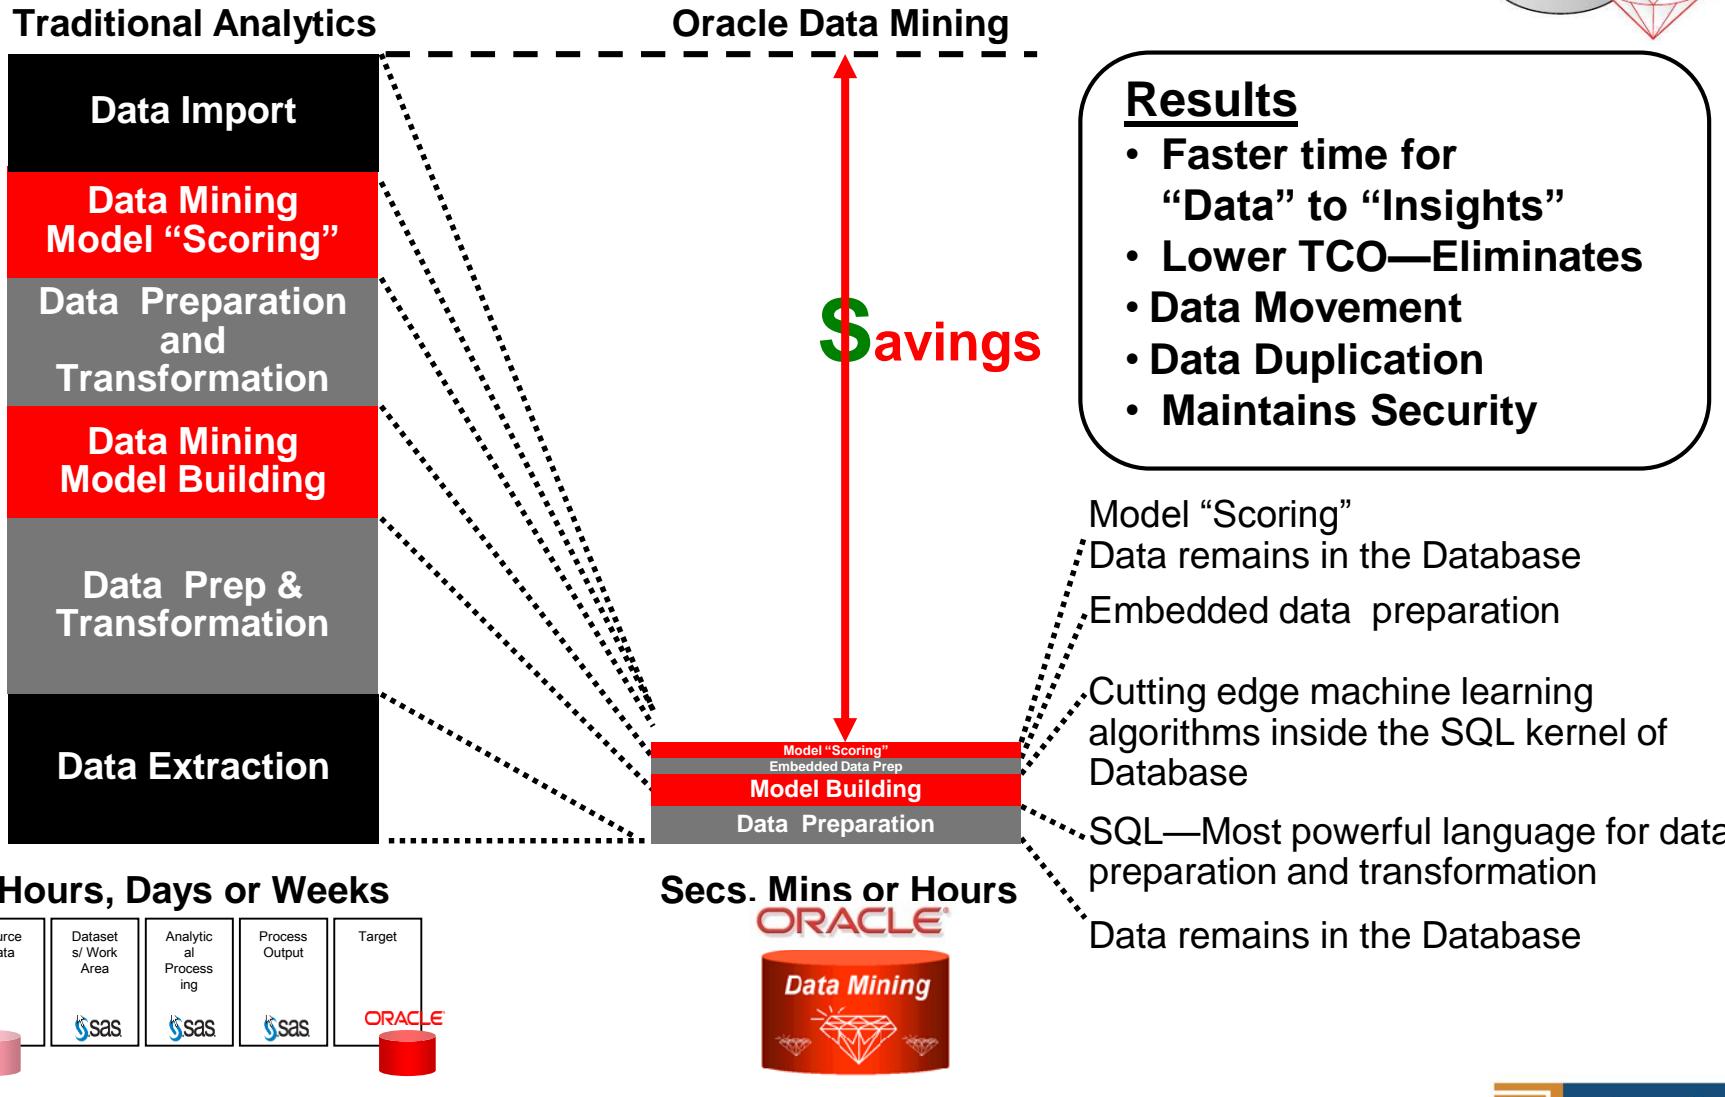

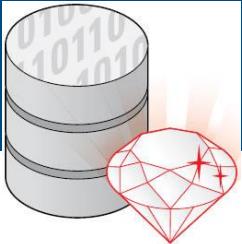

* <http://www.oracle.com/us/corporate/pricing/index.html>

What is Data Mining?

- Automatically sifts through data to find hidden patterns, discover new insights, and make predictions
- Data Mining can provide valuable results:
 - Predict customer behavior (*Classification*)
 - Predict or estimate a value (*Regression*)
 - Segment a population (*Clustering*)
 - Identify factors more associated with a business problem (*Attribute Importance*)
 - Find profiles of targeted people or items (*Decision Trees*)
 - Determine important relationships and “market baskets” within the population (*Associations*)
 - Find fraudulent or “rare events” (*Anomaly Detection*)

In Database Data Mining

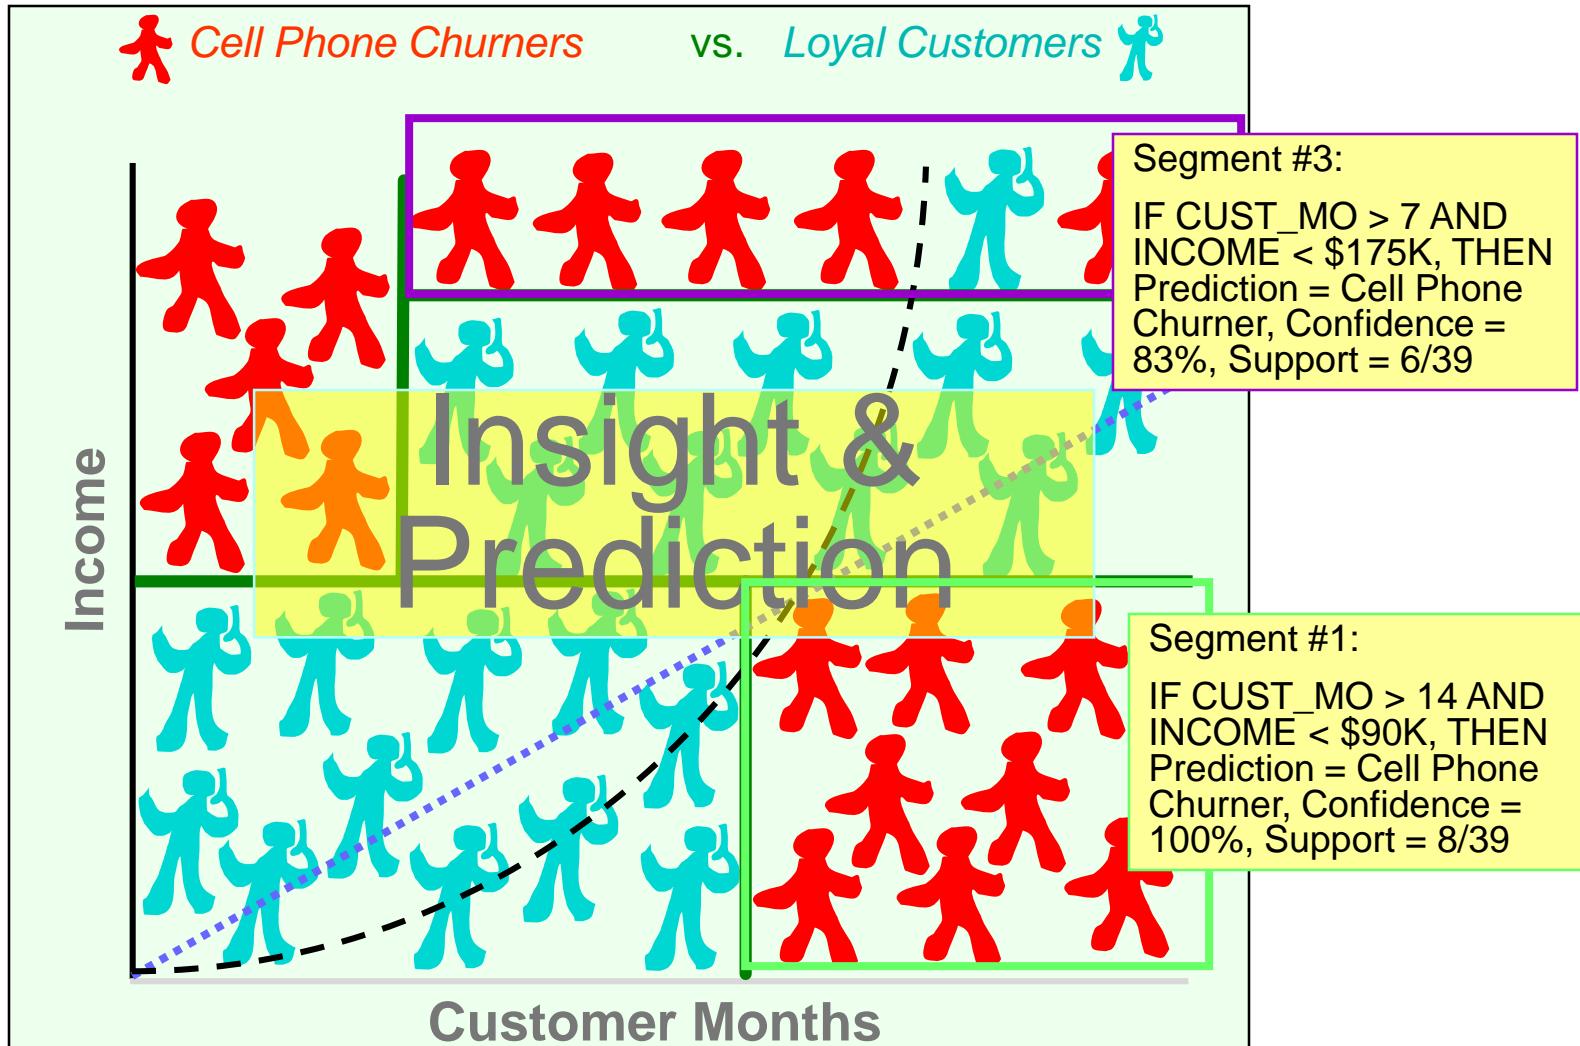

Oracle Data Mining

- Oracle Data Mining is an option for the Enterprise Edition of the Oracle Database.
- A collection of APIs and specialized SQL functions.
- Includes a large number of specialized algorithms and built-in procedures.
- Makes use of many built-in capabilities of the Oracle Database
- ODM typically refers to “Oracle Data Mining”

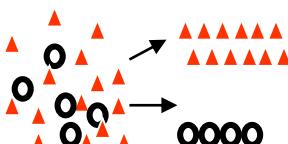

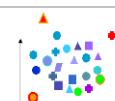

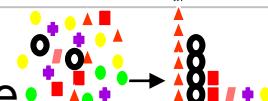

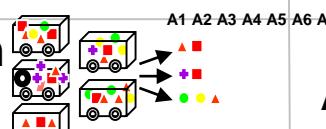

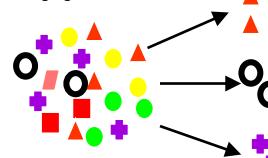

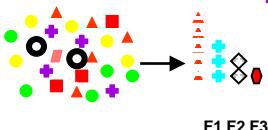

Data Mining Provides Better Information, Valuable Insights and Predictions

Source: Inspired from *Data Mining Techniques: For Marketing, Sales, and Customer Relationship Management* by Michael J. A. Berry, Gordon S. Linoff

Oracle Data Mining Algorithms

Problem	Algorithm	Applicability
Classification 	Logistic Regression (GLM) Decision Trees Naïve Bayes Support Vector Machine	Classical statistical technique Popular / Rules / transparency Embedded app Wide / narrow data / text
Regression 	Multiple Regression (GLM) Support Vector Machine	Classical statistical technique Wide / narrow data / text
Anomaly Detection 	One Class SVM	Lack examples
Attribute Importance 	Minimum Description Length (MDL)	Attribute reduction Identify useful data Reduce data noise
Association Rules 	Apriori	Market basket analysis Link analysis
Clustering 	Hierarchical K-Means Hierarchical O-Cluster	Product grouping Text mining Gene and protein analysis
Feature Extraction 	NMF	Text analysis Feature reduction

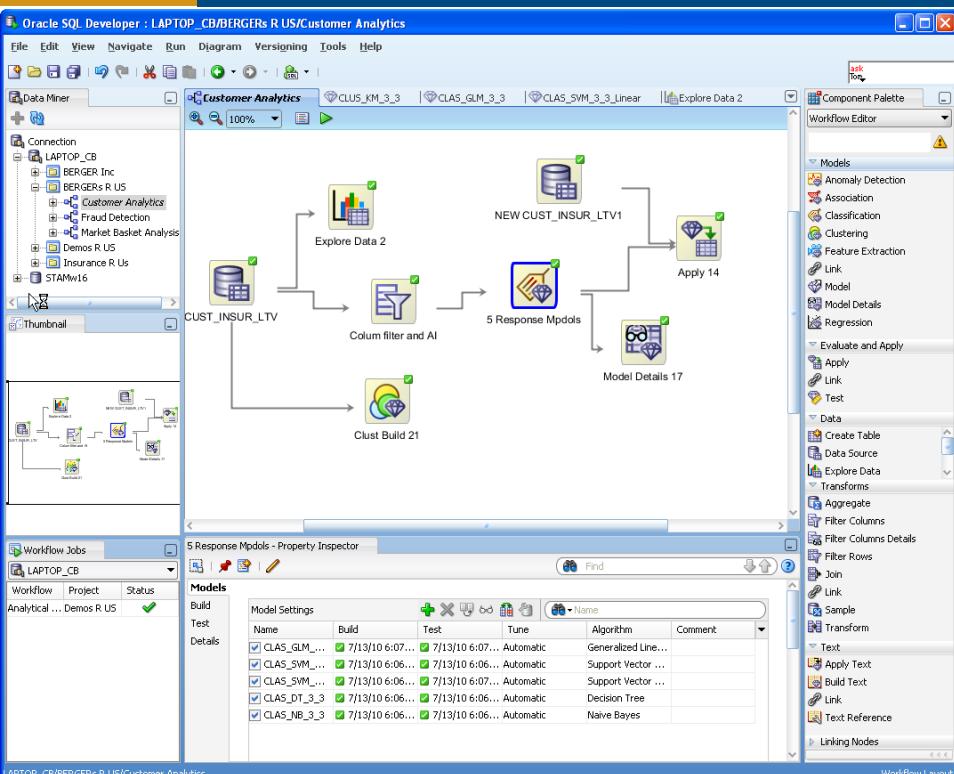

11g Statistics & SQL Analytics (Free)

- Ranking functions
 - rank, dense_rank, cume_dist, percent_rank, ntile
- Window Aggregate functions (moving and cumulative)
 - Avg, sum, min, max, count, variance, stddev, first_value, last_value
- LAG/LEAD functions
 - Direct inter-row reference using offsets
- Reporting Aggregate functions
 - Sum, avg, min, max, variance, stddev, count, ratio_to_report
- Statistical Aggregates
 - Correlation, linear regression family, covariance
- Linear regression
 - Fitting of an ordinary-least-squares regression line to a set of number pairs.
 - Frequently combined with the COVAR_POP, COVAR_SAMP, and CORR functions

Descriptive Statistics

- DBMS_STAT_FUNCS: summarizes numerical columns of a table and returns count, min, max, range, mean, median, stats_mode, variance, standard deviation, quantile values, +/- n sigma values, top/bottom 5 values
- Correlations
 - Pearson's correlation coefficients, Spearman's and Kendall's (both nonparametric).
- Cross Tabs
 - Enhanced with % statistics: chi squared, phi coefficient, Cramer's V, contingency coefficient, Cohen's kappa
- Hypothesis Testing
 - Student t-test , F-test, Binomial test, Wilcoxon Signed Ranks test, Chi-square, Mann Whitney test, Kolmogorov-Smirnov test, One-way ANOVA
- Distribution Fitting
 - Kolmogorov-Smirnov Test, Anderson-Darling Test, Chi-Squared Test, Normal, Uniform, Weibull, Exponential

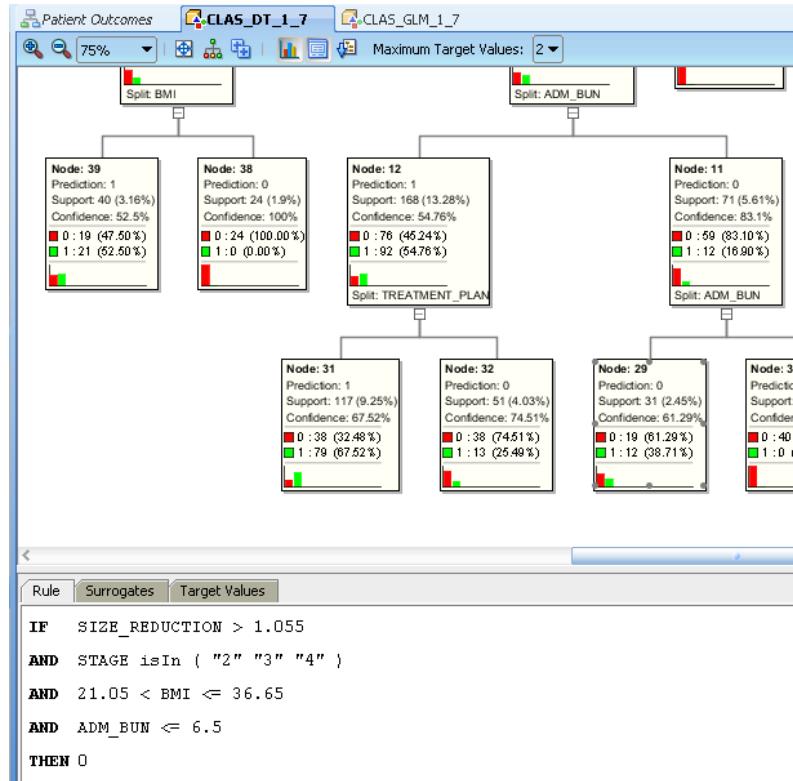

Oracle Data Miner 11g

- Oracle Data Miner is a front end GUI for Oracle Data Mining.
- Extension for Oracle SQL Developer 3.x, 4.x a free utility program from Oracle that facilitates interaction with databases.
- Functions as an object oriented programming interface for designing data mining processes and procedures.

Understand Model Details

- Interactive model viewers

Geo LTV Prediction

Return to Main Index page

Page Information (click to collapse or expand)

Description : This dashboard combines the results of an Oracle Data Mining Classification model with a geographical visual representation of the probabilities in OBIEE maps.

Location LTV Prediction
Time run: 12/9/2011 12:55:35 PM

A map of the San Francisco Bay Area with numerous colored dots representing customer segments. A red box highlights a cluster of dots in the central business district. To the right is a legend titled 'Map Formats' for 'C65 Longitude,C64 Latitude'. It includes a checkbox for 'Probability of Very High LTV (Variable Mark)' which is checked. Below it is a list of ten segments: First Tenth (dark blue), Second Tenth (medium blue), Third Tenth (light blue), Fourth Tenth (purple), Fifth Tenth (brown), Sixth Tenth (tan), Seventh Tenth (yellow), Eighth Tenth (orange), Ninth Tenth (green), and Last Tenth (light green). The 'Eighth Tenth' segment is highlighted with a red box.

Geo LTV Prediction
Time run: 12/9/2011 12:55:35 PM

A map of North America with states colored according to their LTV probability. A red box highlights the western United States. To the right is a legend titled 'Map Formats' for 'OBIEE_STATE'. It includes a checkbox for '1- Revenue (Bar Graph)' which is checked. Below it is a list of six segments: First Tenth (red), Second Tenth (orange), Third Tenth (yellow), Fourth Tenth (light green), Fifth Tenth (green), and Last Tenth (light green). The 'First Tenth' segment is highlighted with a red box.

vlamis SOFTWARE SOLUTIONS

What is Spatial Data?

- Business data that contains or describes location
 - Street and postal address (customers, stores, factory, etc.)
 - Sales data (sales territory, customer registration, etc.)
 - Assets (cell towers, pipe lines, electrical transformers, etc.)
 - Geographic features (roads, rivers, parks, etc.)
- Anything connected to a physical location
- Any data sets that contain “link and node” relationships between data objects. Can be directional or non-directional.

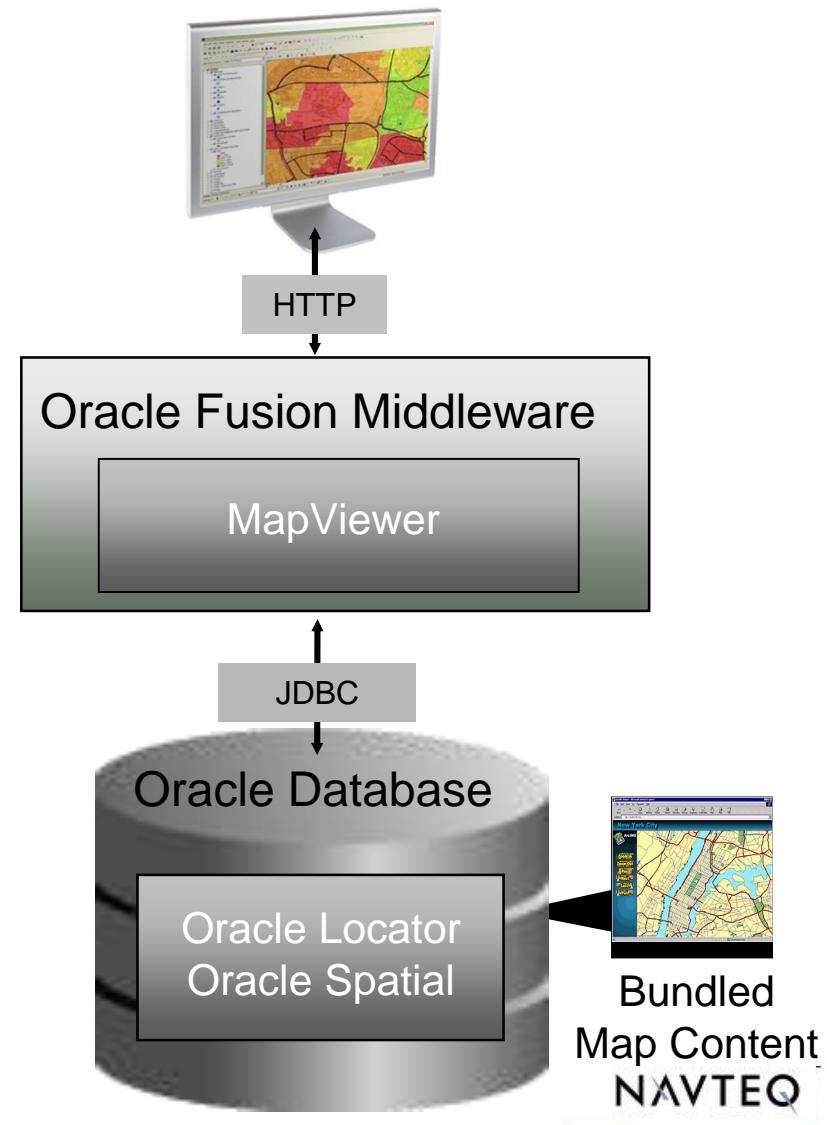

Natively Manage All Geospatial Data

Oracle Spatial Technologies

- **Oracle Locator:** Feature of Oracle Database XE, SE, EE
- **Oracle Spatial:** Priced option to Oracle Database EE
- **MapViewer:** Java application and map rendering feature of Oracle Fusion Middleware
- **Workspace Manager:** Long transactions feature of Oracle Database SE, EE
- **Bundled Map Content:** Major roads, administrative boundaries (city, county, state, country) - worldwide coverage from Navteq

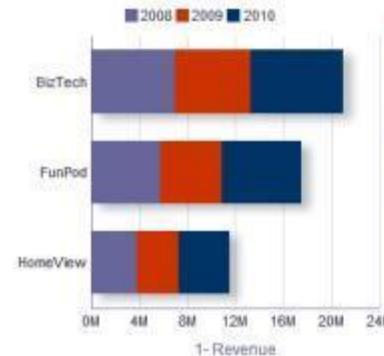

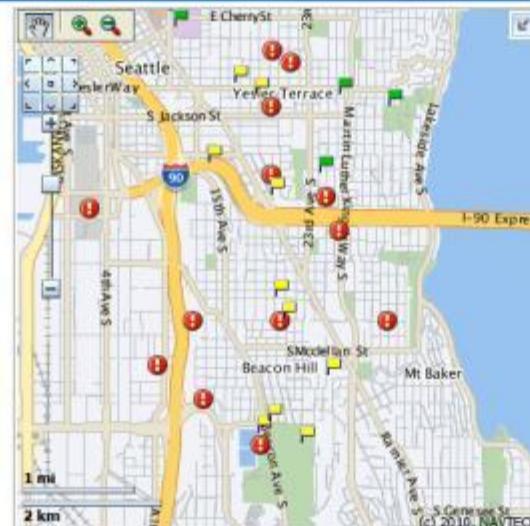

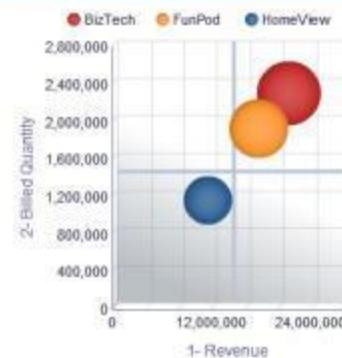

What is Spatial Data?

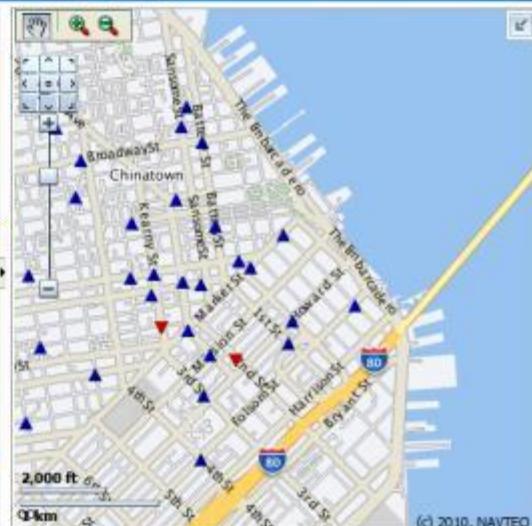

- Business data that contains or describes location
 - Street and postal address (customers, stores, factory, etc.)

- Anything connected to a physical location
- Any data sets that contain “link and node” relationships between data objects. Can be directional or non-directional.

Depict and Detect Spatial Relationships

ORACLE® Answers

OBIEE_Viz_Maps_Cities

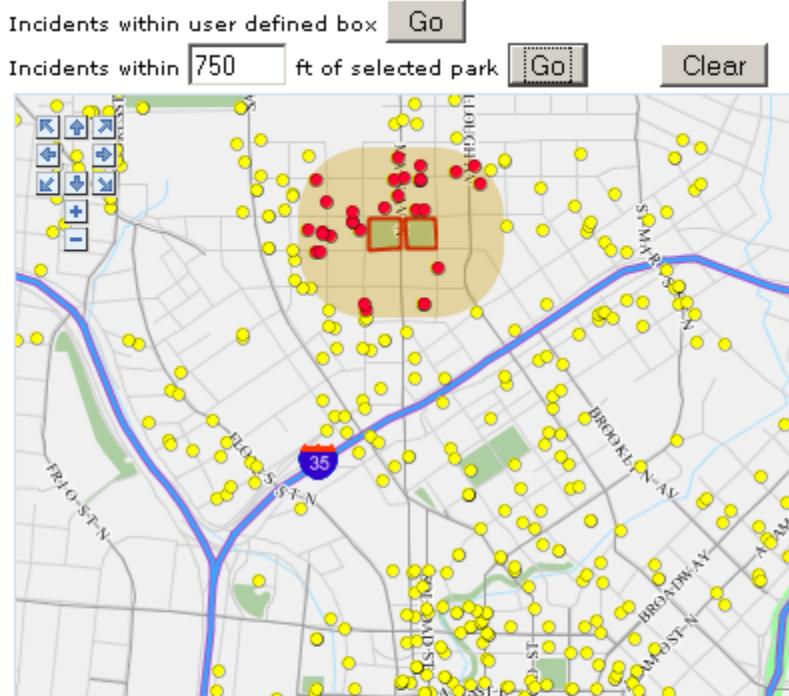

Why Maps are Powerful

Maps convey dense, multi-dimensional relationships in data faster and more intuitively than any other graphical display methodology.

Some Analysis Is Possible Only with Spatial Analytics

Oracle Locator and Oracle Spatial

- Oracle Locator is a **feature** of both Oracle Standard and Enterprise Database Editions.
- Oracle Locator provides basic location functionality.
 - Point, line, and polygon spatial locations (SDO_GEOMETRY)
 - Spatial indexing
 - Spatial operators that use the spatial index for performing spatial inquiries.
- Oracle Spatial is an **option** for Oracle Database Enterprise Edition
 - Provides extensive support for advanced spatial processing and analytics including routing, vector and raster data, topology and network models, and more.

What is R?

CRAN Task Views

- R is an Open Source scripting language and environment for statistical computing and graphics
<http://www.R-project.org/>
- Popular alternative to SAS, SPSS & other proprietary statistical environments
- Around 2 million R users worldwide
- Thousands of R packages available

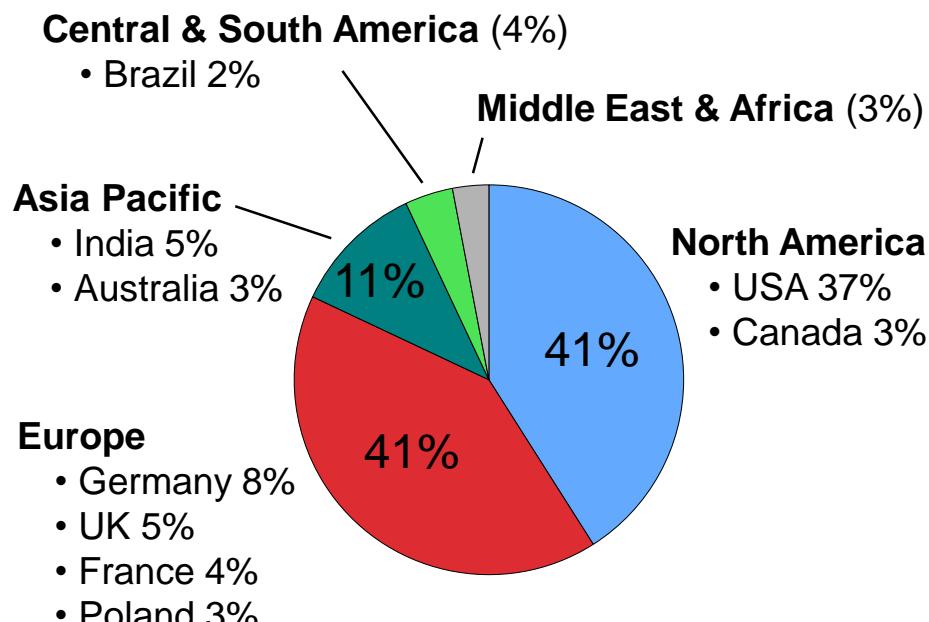

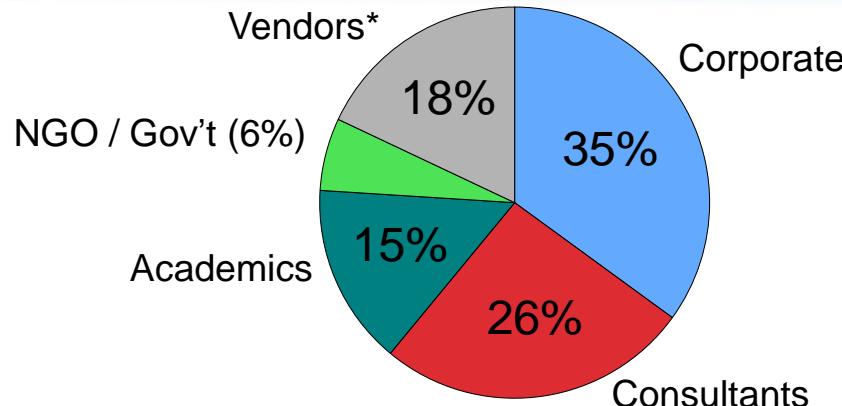

Bayesian	Bayesian Inference
ChemPhys	Chemometrics and Computational Physics
ClinicalTrials	Clinical Trial Design, Monitoring, and Analysis
Cluster	Cluster Analysis & Finite Mixture Models
DifferentialEquations	Differential Equations
Distributions	Probability Distributions
Econometrics	Computational Econometrics
Environmetrics	Analysis of Ecological and Environmental Data
ExperimentalDesign	Design of Experiments (DoE) & Analysis of Experimental Data
Finance	Empirical Finance
Genetics	Statistical Genetics

2013 Rexer Analytics Data Miner Survey:

Vendors are included in this analysis.

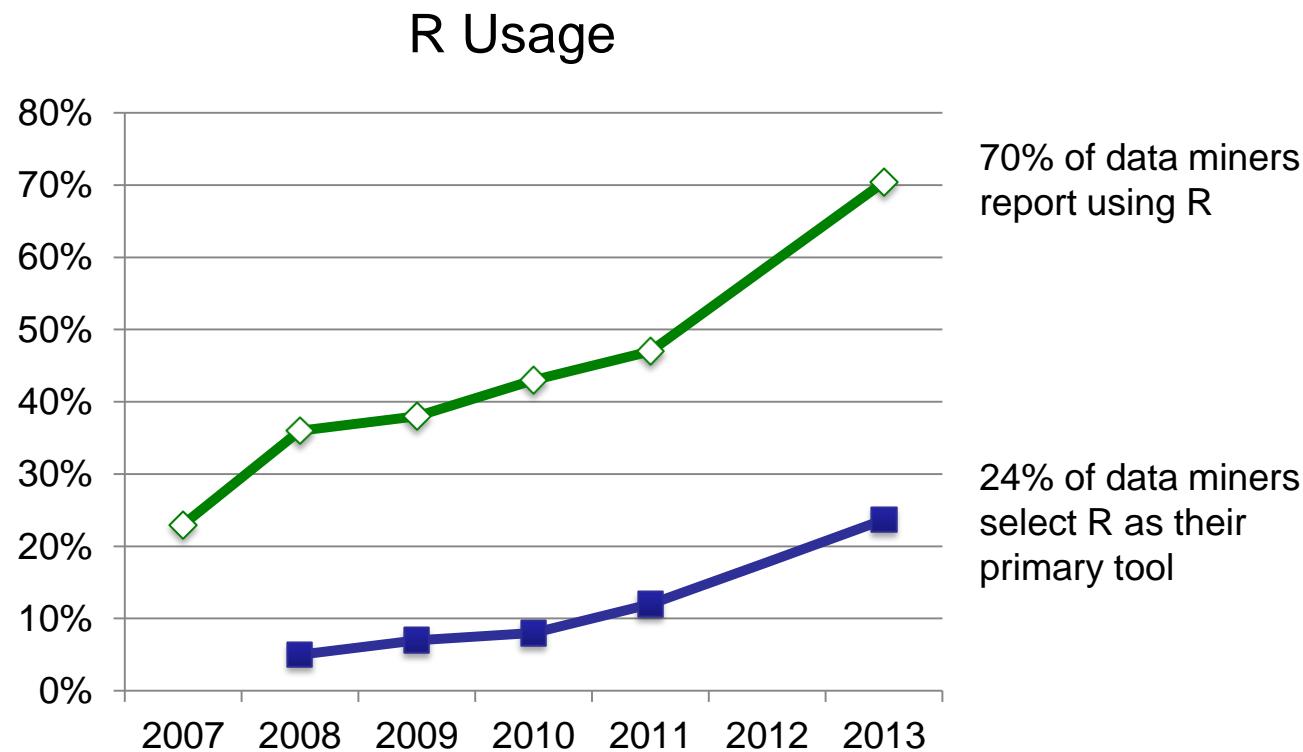

- 6th survey since 2007
- 68 questions
- 10,000+ invitations emailed, plus promoted by newsgroups, vendors, and bloggers
- Respondents: 1,259 data miners from 75 countries
- Data collected in first half of 2013

*Data from software vendors is excluded from analyses in this presentation unless otherwise noted.

The Popularity of R Software is Skyrocketing

The proportion of data miners using R is rapidly growing, and since 2010, R has been the most-used data mining tool. While R is frequently used along with other tools, an increasing number of data miners also select R as their primary tool. Among data miners who say they are likely to switch their primary package in the coming year, R is frequently identified as the tool they are plan to switch to – more than 2.5 times more often than any other tool.

Oracle R Enterprise

- Part of the Advanced Analytics Option to the Oracle Database Enterprise Edition
- Provides transparent access to database-resident data from R
- Embedded R script execution through database managed R engines with SQL language integration
- Provides data and task parallelism and full power of Oracle database for R
- Enables advanced statistics for in-database execution
- Integrates R into the IT software stack
- Extends and enhances open source R

Oracle R Distribution

ability to dynamically load:

Intel Math Kernel Library (MKL)
AMD Core Math Library
Solaris Sun Performance Library

Oracle
Support

- Improved scalability at client and database for embedded R execution
- Enhanced linear algebra performance using Intel's MKL, AMD's ACML, and Solaris Sun Performance Library
- Enterprise support for customers of Oracle Advanced Analytics option, Big Data Appliance, and Oracle Linux
- Available as a free download from Oracle
- Oracle to contribute bug fixes and enhancements to open source R

Other R Offerings

- ROracle
 - Open source Oracle database interface driver for R based on OCI
 - Maintained by Oracle, optimizations and bug fixes released to open source community
- Oracle R Connector for Hadoop
 - R interface to Oracle Hadoop Cluster on Big Data Appliance
 - Access and manipulate data in HDFS, database, and file system
 - Write MapReduce functions using R and execute through R
- Rstudio
 - Popular open source user interface for R
 - Integrated Development Environment
- Rcommander
 - Extended GUI for R
 - Used for plugins (e.g. text mining)
 - Often used with Rstudio

R now integrated into OBIEE 11.1.1.7

Oracle Test Drive

- Free to try out Oracle BI
- Go to www.vlamis.com/testdrive-registration/
- Runs off of Amazon AWS
- Hands-on Labs based on Collaborate 2012 HOLs
- Test Drives for:
 - Oracle BI
 - BI Publisher
 - Microsoft Excel against Oracle OLAP
 - Oracle Data Mining
 - Map Views in OBIEE
- Once sign up, you have private instance for 5 hours
- Available now
