# **Data Visualization for Oracle Business Intelligence 11g**

## **BIWA Summit 2015**

**Tim Vlamis**

**Dan Vlamis**

**Vlamis Software Solutions**

**816-781-2880**

**<http://www.vlamis.com>**

# BIWA SIG

## Oracle Business Intelligence Warehousing and Analytics Summit

Oracle HQ Conference Center  
Redwood City, California

- Started in summer of 2006
- BIWA Summits since 2007, first one near DC, rest in CA
- BIWA Summit 2015 took place Jan 27-29, 2015 at Oracle HQ
- Focus on Advanced Analytics, Big Data, BI, DW, EPM, IoT
- Managed by Volunteer Board Members and Oracle Advisors

# BIWA Summit 2016, Jan 26-28

## Oracle HQ Conference Center

Business Intelligence, Warehousing and Analytics  
and Spatial

IOUG Special Interest Group

[www.biwasummit.org](http://www.biwasummit.org)

LEARN AT  
#C15LV

## **COLLABORATE 15 – IOUG Forum**

**April 12-16, 2015**  
**Mandalay Bay Resort and Casino**  
**Las Vegas, NV**

### **The IOUG Forum Advantage**

- Save more than \$1,000 on education offerings like pre-conference workshops
- Access the brand-new, specialized IOUG Strategic Leadership Program
- Priority access to the hands-on labs with Oracle ACE support
- Advance access to supplemental session material and presentations
- Special IOUG activities with no "ante in" needed - evening networking opportunities and more

**[www.collaborate.ioug.org](http://www.collaborate.ioug.org)**

**Follow us on Twitter at @IOUG or follow the  
conference hashtag #C15LV!**

# Vlamiis Software Solutions

- Vlamiis Software founded in 1992 in Kansas City, Missouri
- Oracle Gold Partner, Oracle University Partner
- Developed more than 200 Oracle BI systems
- Specializes in ORACLE-based:
  - Business Intelligence
  - Data Warehousing
  - Data Mining and Predictive Analytics
  - Data Visualization
- Expert presenter at major Oracle conferences
- Authors of 2015 book “Data Visualization for Oracle BI 11g”
- Co-author of book “Oracle Essbase & Oracle OLAP”
- [www.vlamiis.com](http://www.vlamiis.com) (blog, papers, newsletters, services)
- Beta tester for OBIEE 11g, 12c
- Conference chair for BIWA Summit 2014, 2015

# Tim and Dan Vlamis

- Tim (business analyst and academic guy)
  - 25+ years in business modeling, valuation, and scenario analysis
  - Professional Certified Marketer (PCM) from AMA
  - Active Member of NICO (Northwestern Institute on Complex Systems)
  - Adjunct Professor of Business, Benedictine College
  - MBA Kellogg School of Management (Northwestern University)
  - BA Economics Yale University
- 
- Dan (OLAP expert and career IT guy)
  - 25+ Years in business intelligence/executive information systems
  - Led development team at IRI
  - Founded Vlamis Software Solutions 20+ years ago in 1993
  - Author, speaker, Oracle ACE Director
  - BA Computer Science Brown University

# New Book!

Special Thanks to:

Paul Carlstroem

Philippe Lions

Brian Macdonald

Jayant Sharma

Oracle BI Prod Mgmt

# Table of Contents

1. Introduction	1
2. Tables	19
3. Graphs	59
4. Maps	93
5. Advanced Visualizations	123
6. BI Publisher	157
7. Dashboard Design & Mechanics	177
8. Dashboard Interactions	205
9. Scorecard & Strategy Management	233
10. Mobile	245
11. Other Visualization Topics	269
12. General Advice	299
Index	315

# What to expect in the book

- Not a “how to”, more of a “what and why to”
- Not every example is perfect
- Writing process (Tim rough draft, Dan challenge and fix)
- Color challenge (gray scale versus color)
- Content challenge (advanced material requires explanation which we didn’t have space for)

# Presentation Agenda

- Human cognition insights
- OBIEE demo
- Table design
  - Best practices
  - When and when not to use
- Graph design
  - Best practices
  - Use cases for different graph types
- Questions from audience at all times

# Many BI Systems Can Create Beautiful Results

# OBI Operates at a Different Scale

**Ingredients → Data Quality & Variety**

# Technique → Data Processing & Prep

# Presentation → Data Visualization

# OBIEE Demo Content from Chap 1

### Delay % by Passenger x Miles

#### Log / Log Scale

# Best Practice Focus

- Best practices are objective guides to what is likely to work best.
- Visualizations should be guided by:
  - Human cognition
  - Accurate representations of data
  - Preferred message (consciously designed by visualization developer)
- Visualizations should NOT be guided by:
  - Taste or what looks “good” to one person
  - Entertain users
  - A desire to “fill the white space”

# The Principles of Human Cognition Should Guide BI Dashboard Design

# Classic Optical Illusions

# The Spirals are the Same Color

# Graphs and Tables

- Graphs and Charts depict visual representations and relationships

- Tables show data organized for lookup of specific, precise values or items.

Order Type	No of Orders	Sales	Billed Quantity	Actual Unit Price
Express	13,980	\$14,027,034	1,117,199	\$12.56
Secure	29,347	\$28,513,745	2,326,540	\$12.26
Standard	27,673	\$27,459,221	2,213,482	\$12.41
<b>Grand Total</b>	<b>71,000</b>	<b>\$70,000,000</b>	<b>5,657,221</b>	<b>\$12.37</b>

# Characteristics of Tables

- Can present data at drastically different scales.
- Can present very different data types simultaneously.
- Can repeat and include multiple sets of the same data values.
- Are extraordinarily dense and include numerous data relationships without direct distortion of the data itself.
- Tables can present “federated” data from different sources in a single simultaneous view.

# Pivot Table “Needs” Sentence

*I want to see Sales (specific values) by Product Type and Company (define rows) across Market Segment (define columns).*

# 7 Keys to Effective Graphs

- Do not use 3-D effects.
- Avoid “stop light” color palette.
- Prefer pastel color palettes and avoid bright colors.
- Eliminate gridlines, drop shadows, and other graphics.
- Enable interaction for “exploration” graphs.
- Prioritize a single message for “explanation” graphs.
- Above all else, show the data!

# Line Graph

- Show a pattern or progression over a continuous range.
- Can be valued within a range to highlight a particular pattern (careful!).
- Maintain a rectangular shape close to golden proportion.
- Use scale marker lines and ranges for context.

# Line Graph

- Use darker versions of standard colors.
- Eliminate grid lines.
- Use zoom function for detailed line graphs.
- Choose curved lines to smooth overall shape.
- Choose stepped lines to emphasize point transitions.

## Target Revenue % by Brand for 2012

# Bar Graphs

- Show nominal data values in comparison to one another.
- Start with zero.
- If use a logarithmic scale, clearly notate.
- Think through sort order carefully.

# Bar Graphs

- Add data labels as interactive rollover.
- Balance colors.
- If change is most important, graph change.

# Stacked Bar Chart

- Somewhat confusing, not great for representing change.
- Total is most clearly represented number.
- Typically stack with largest values on the bottom.
- Single scale can make for interesting intra-bar comparisons.

# Pie Charts

- Typically used for showing parts of whole by percentage.
- Not great for piece to piece comparisons.
- Limit number of pieces.
- Can be interesting to show lots of pies together if significant differences exist.
- Stephen Few hates them.
- Do not use 3-D.

# Scatter Plot

- Shows single data points at the intersection of two values.
- Often depict a large number of discrete data points (hundreds or thousands).
- Useful comparisons of two variables.
- Trend lines are often added.
- Clearly notate if use logarithmic scale(s).

# Bubble Chart

- Special type of scatter plot.
- Size of bubble is related to a third variable.
- Color is related to a fourth variable.
- Reduces number of points that can be depicted.
- Best for depicting approximate values and comparisons.

# Dashboard Definition

*A Dashboard is a visual presentation of current summary information needed to manage and guide an organization or activity.*

# BI Dashboards are Different

- No mechanical systems needed to move indicators.
- Decisions are not typically made on a second-to-second basis.
- BI dashboards are not primarily single situation or single person devices.

# BI Dashboards

- Role-based.
- Data selection and filtering are extremely important.
- Dashboards support evidenced-based decision making.
- Shared understanding of business situation is a key benefit.
- Content may be individualized.
- Design should be standardized.

# OBIEE Dashboard Overview

- Designed with columns and sections (containers).
- Presentation server is often separate from BI server.
- Dashboards are web-based and are viewed with browsers.
- HTML, XML, and Java coding skills are useful, but not required.

# Dashboard Principles

- Promote user interactivity
  - Prompts
  - View and column selectors
  - Hierarchical column drills
  - Column sorts
  - Guided navigation and action links
- Promote data transparency
  - Prompts
  - Filter views
  - Narrative views
  - Master detail linking
- Establish design guidelines for consistency

# Maps

- Humans think spatially
- Types of maps
- Map best practices
- Making meaningful maps
- Built-in data sets
- HERE (NAVTEQ) data sets and POI data
- Sources for additional data sets

# Why Maps are Powerful

**Maps convey dense, multi-dimensional relationships in data faster and more intuitively than any other graphical display methodology.**

# When Are Map Views Useful?

- Visualizing data related to geographic locations.
- Showing or detecting spatial relationships and patterns.
- Showing lots of data in a relatively small area.
- Drilling down from a (map) overview to a detailed report, chart, or graph.
- When is location important? Can the dimension be plotted on a map?

# Map View Tips

- Think about what scale to use. Different map scales will reveal different patterns and insights.
- Use Variable marker to display two measures on a map at a point – size and color.
- Avoid overlapping shapes too much.
- Be aware of spatial distortions E.g. Texas is larger than Connecticut.
- Look at color palette. [www.colorbrewer2.org](http://www.colorbrewer2.org)

# Map Definitions

- **FEATURE**
  - Provide a spatial context: cities, highways, rivers, etc...
  - Features of Interest: store location, postal boundaries, pipelines, etc...
- **STYLE**
  - Define rendering properties for features
  - Can control fill color, border color, line thickness, line style and more
- **THEME**
  - Collection of features
  - Typically associated with a spatial geometry layer
  - County/state boundaries, major highways, etc...
- **BASEMAP**
  - A grouping of themes to create a map
  - Maps can share themes
  - When associating a theme with a map, can specify min scale and max scale (sometimes known as zoom control)
- **MAP**
  - Basemap with additional themes overlain

# Map Interactivity in OBIEE 11g

- Display BI data on top of maps
  - Color fill
  - FOI point display
- Interact with other Dashboard Elements
  - Drive map content with dashboard prompts
  - Drive map content through drilling and navigation
  - Drive other dashboard elements through map interactions
- Reveal additional information on maps through mouseovers
- Drill to map detail

# Map View Formats

- Color Fill (choropleth)
  - Percentile, Value, Continuous binning
  - Dashboard user run-time slider
- Graphs – Bar, Pie
  - Adjustable graph size
  - Series by second dimension
- Bubble (variable sized)
  - Min-Max size specification
  - Color specification
- Variable Shape
  - Circle, Triangle, Diamond
  - Customizable
- Image
  - Imported via MapViewer
  - More can be added from MapBuilder
- Custom Point Layer
  - Uses Lat / Long
  - Does not require a Layer Def

# Trellis Charts

- Trellis Layout of Smaller Charts in a grid with Consistent Scales
- Great for finding structures / patterns in complex data
- Use 2D Layout to View Multidimensional Data (like a timeline –*mental animation*)

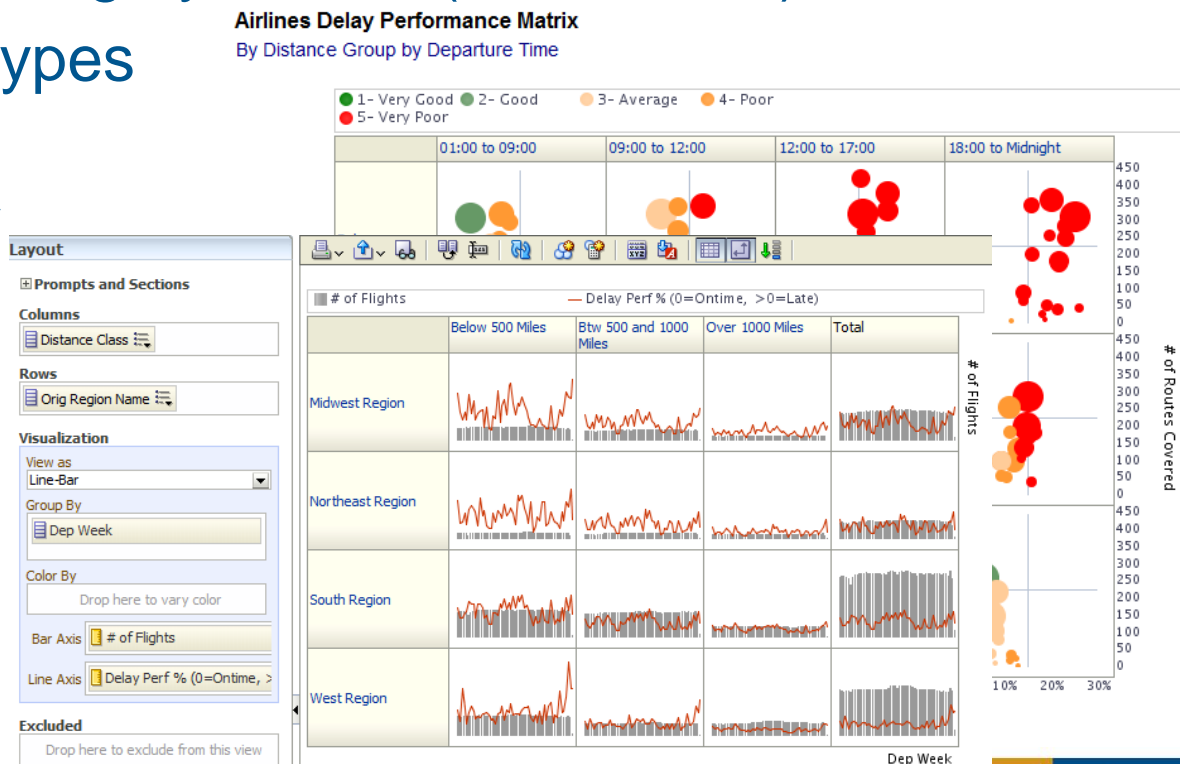

# Trellis View - Simple

- Single type of inner visualization
- Common synchronized scale across all graphs
- Has scale showing by default (can turn off)
- Lots of graph types

- Vertical Bar
- Horizontal Bar
- Line
- Area
- Line-Bar
- Pie
- Scatter
- Bubble

# Trellis View - Advanced

- Pivot table with numbers or graphs in cells
- Each microchart has its own scale and not shown
- Most often used to see trend lines
- No axis description, so across should be time
- Can have different visualizations for different measures

- Spark bar
- Spark line
- Spark area
- numbers

**Layout**

**Prompts and Sections**

**Columns**

Distance Class

**Rows**

Orig Region Name

**Measures**

Passengers x Miles Freight (Tons)

**Visualization**

Passengers x Miles

View as Spark Bar

Bars

☒ Dep Month

**Excluded**

Drop here to exclude from this view

	Below 500 Miles				Btw 500 and 1000 Miles			
	Passengers x Miles	Freight (Tons) x Miles	# of Flights	Air Time (Min)	Passengers x Miles	Freight (Tons) x Miles	# of Flights	Air Time (Min)
Midwest Region				100,351,347				42,514,617
Northeast Region				69,311,220				27,952,248
South Region				207,307,137				80,311,239
West Region				119,467,902				72,028,127

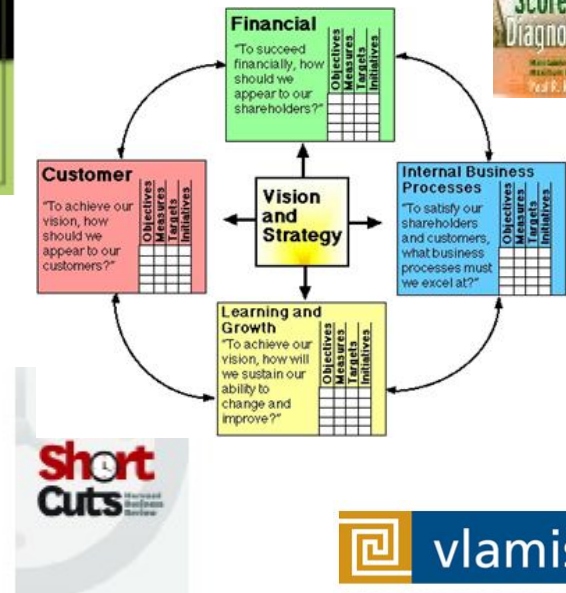

# New Trellis Views

- Does not require Exalytics but need fast Pres Server
- Can display LOTS of data in compact form
- Capable of dense visualizations
  - Great for snapshot of trending
  - Great for comparing patterns across dimension values
- Two types
  - Simple (shows full graphs per cell)
  - Advanced (sparklines – no scales per cell, separate scales)
- Need to think what you're trying to show on a trellis

# OBI Scorecard & Strategy Management

- Integrated toolset in OBIEE
- Follows “Balanced Scorecard” methodology
- Enables corporate goals and objectives to be monitored and managed
- Includes strategy maps, strategy trees, KPI watch lists, and cause and effect maps

# New Contribution Wheel Visualization

# Strategy Tree View
