<http://www.vlamis.com>

VlamiS Software Solutions

- Founded in 1992 by Dan VlamiS in Kansas City, MO
- Developed/implemented more than 200 Oracle BI systems
- Specializes in ORACLE-based:
 - Business Intelligence
 - Analytic Options to Oracle DB (OLAP, Data Mining, Spatial)
 - Data Warehousing
 - Training and mentoring
- Expert presenter at major Oracle conferences
- www.vlamiS.com (blog, papers, newsletters, services)
- Co-authored book “Oracle Essbase & Oracle OLAP”
- Beta tester for OBIEE 11g
- Reseller for Simba and NAVTEQ map data for OBIEE
- HOL Coordinator for 2012 Collaborate Conference

Tim VlamiS and Brian Terry

- Tim (business analyst and academic guy)
 - 20+ years in business modeling, valuation, forecasting, and scenario analyses
 - Professional Certified Marketer (PCM) from AMA
 - Active Member of NICO (Northwestern Institute on Complex Systems)
 - Adjunct Professor of Business, Benedictine College
 - MBA Kellogg School of Management (Northwestern)
 - BA Economics Yale University
- Brian (Oracle expert and hands-on IT guy)
 - 25+ Years experience in software and hardware architectures
 - 11 years SC at Oracle Corporation
 - Expertise in data modeling
 - Expertise in large scale HW / SW Architectures
 - Interests include physical computing, visualization, and graphics

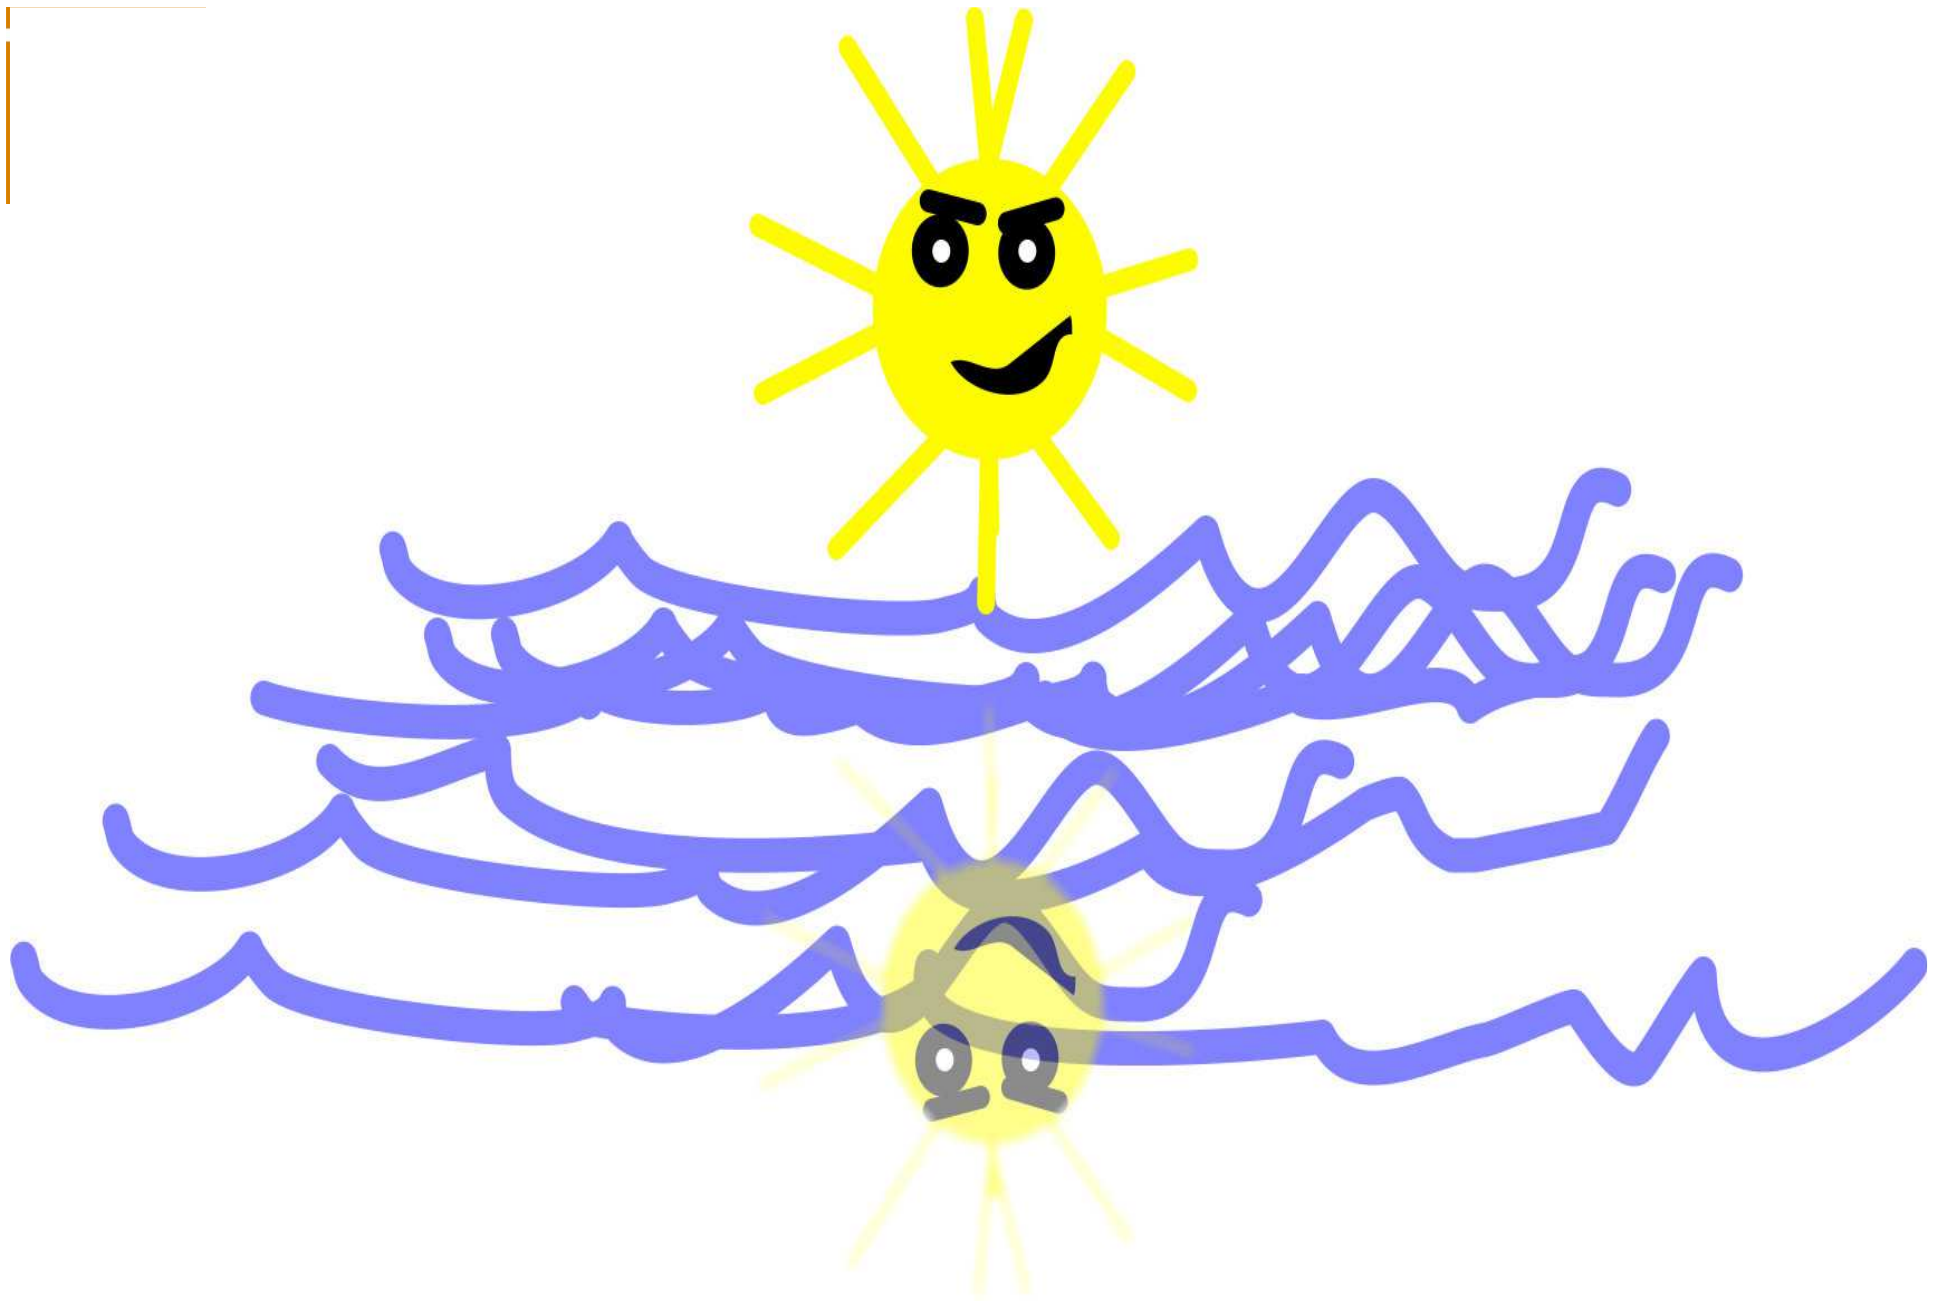

Pretty Sunset Description

The sun is setting over the pacific. ---

The light is glistening off the water, reflecting in the waves...

Nature at it's peaceful best . . .

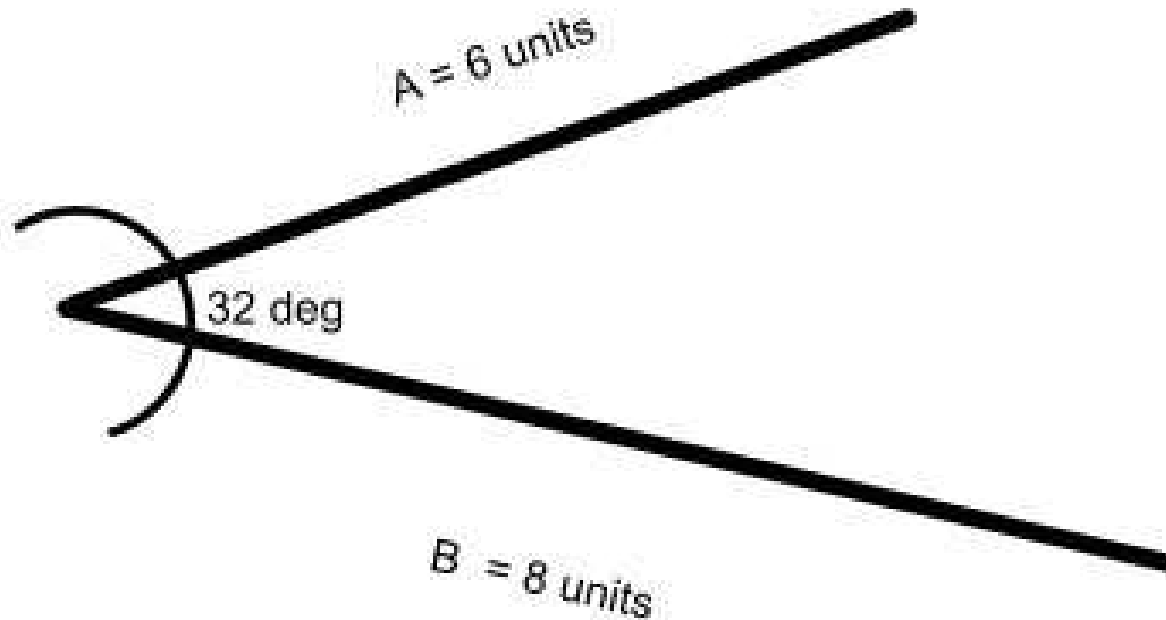

Visualize this serene seascape . . .

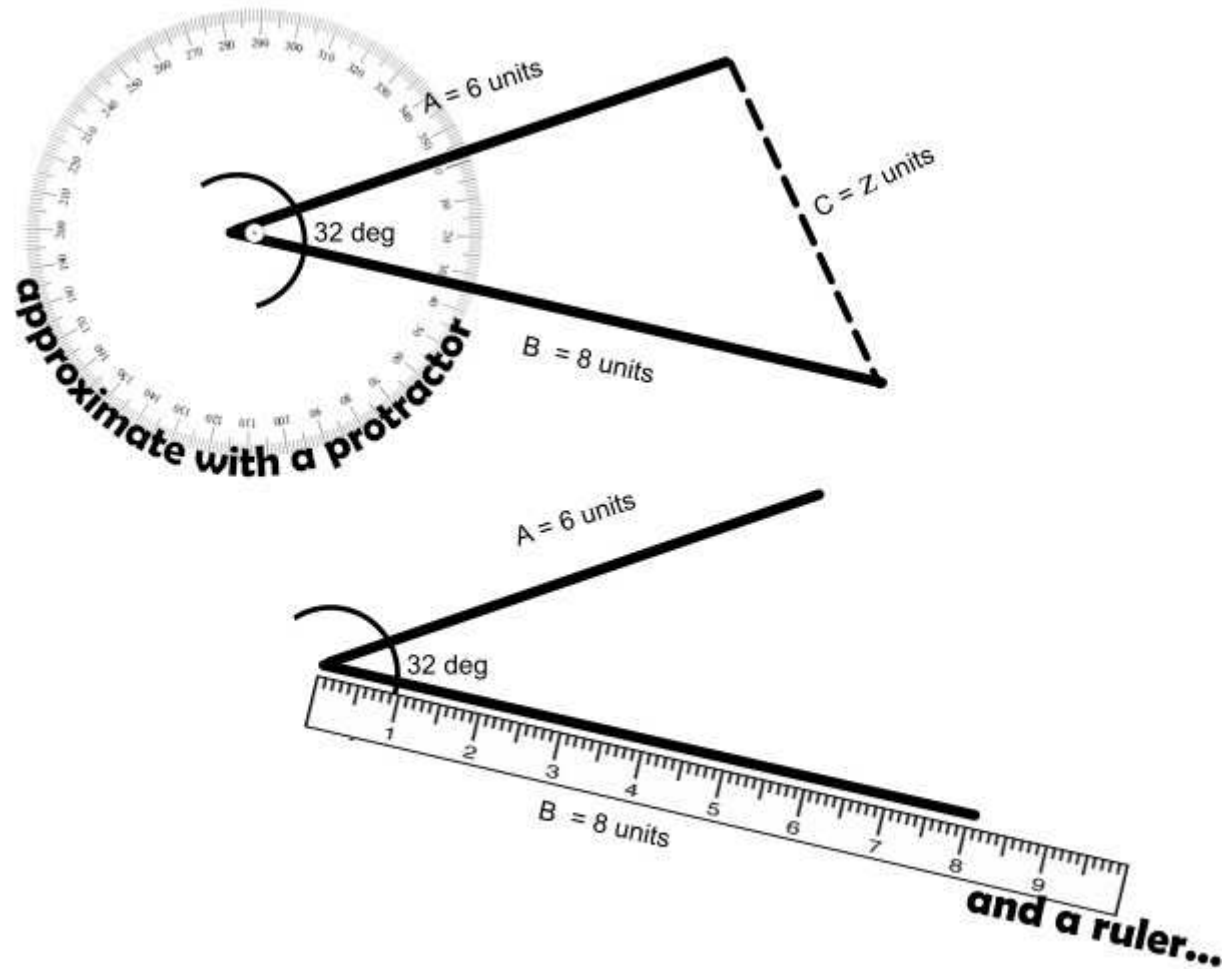

Calculate the Third Side

Protractor and ruler...but how do I show my work and prove it's correct?

You Could

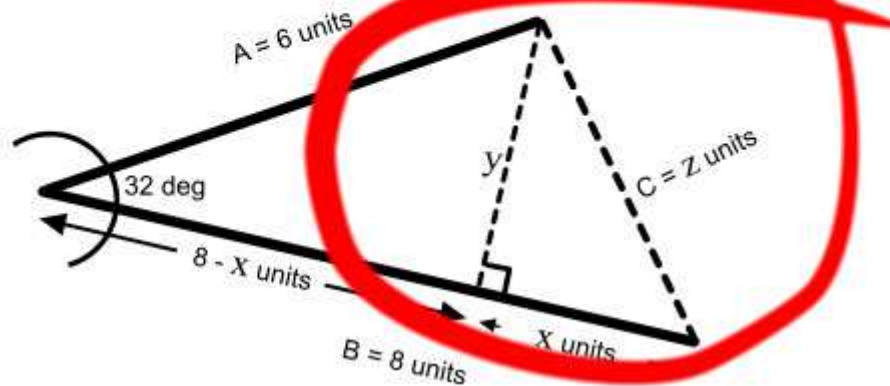

...what about accuracy ... or consistency ?

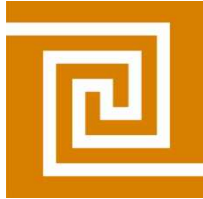

Visualization Offers Insights

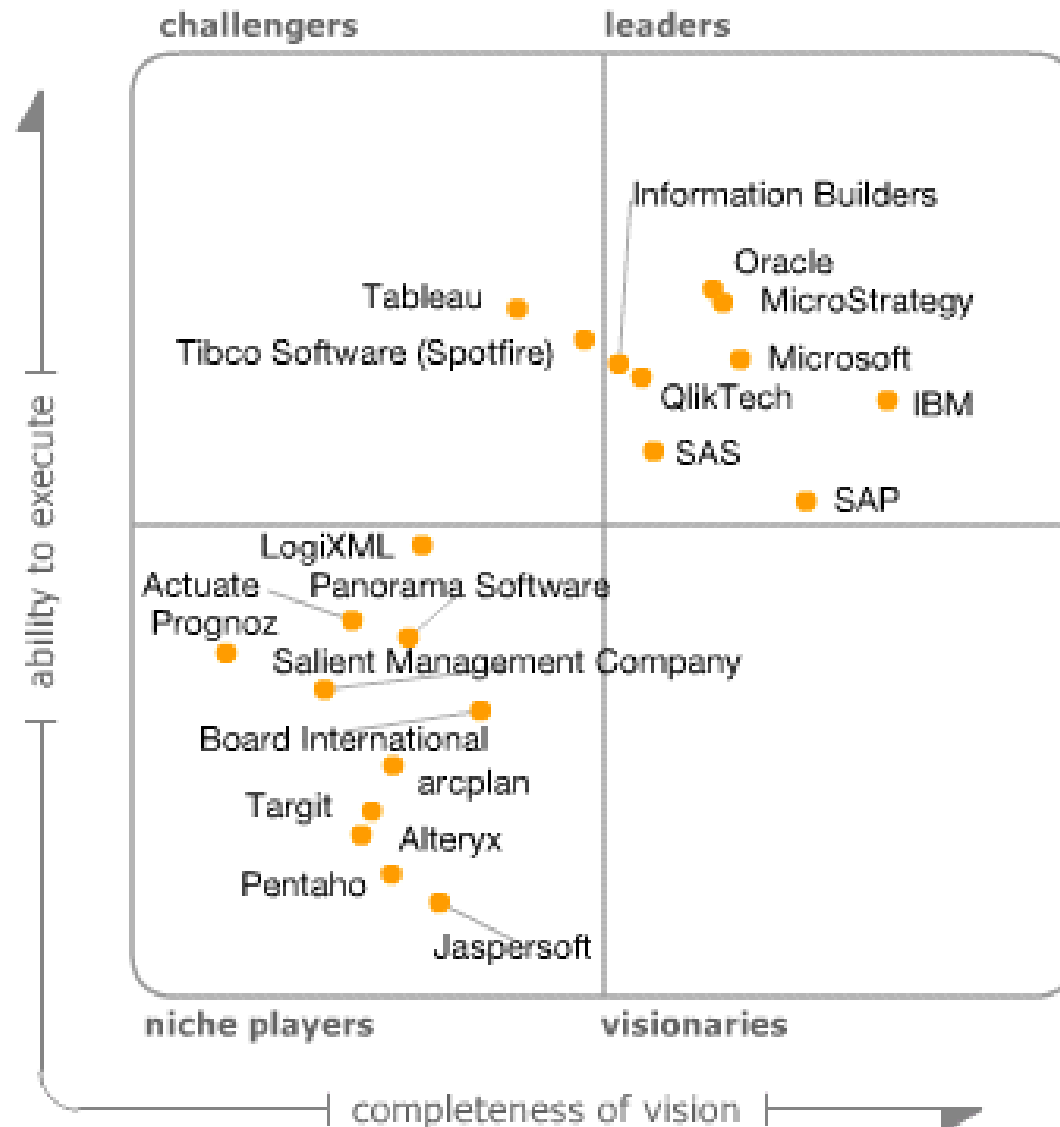

**Or you could employ visualization techniques
to re-frame the problem . . . into a metaphor that lends
itself to better accuracy**

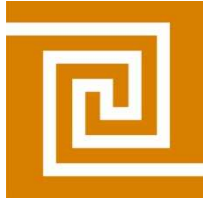

$$a^2 + b^2 = c^2$$

Gartner Magic Quadrant for BI Feb 2012

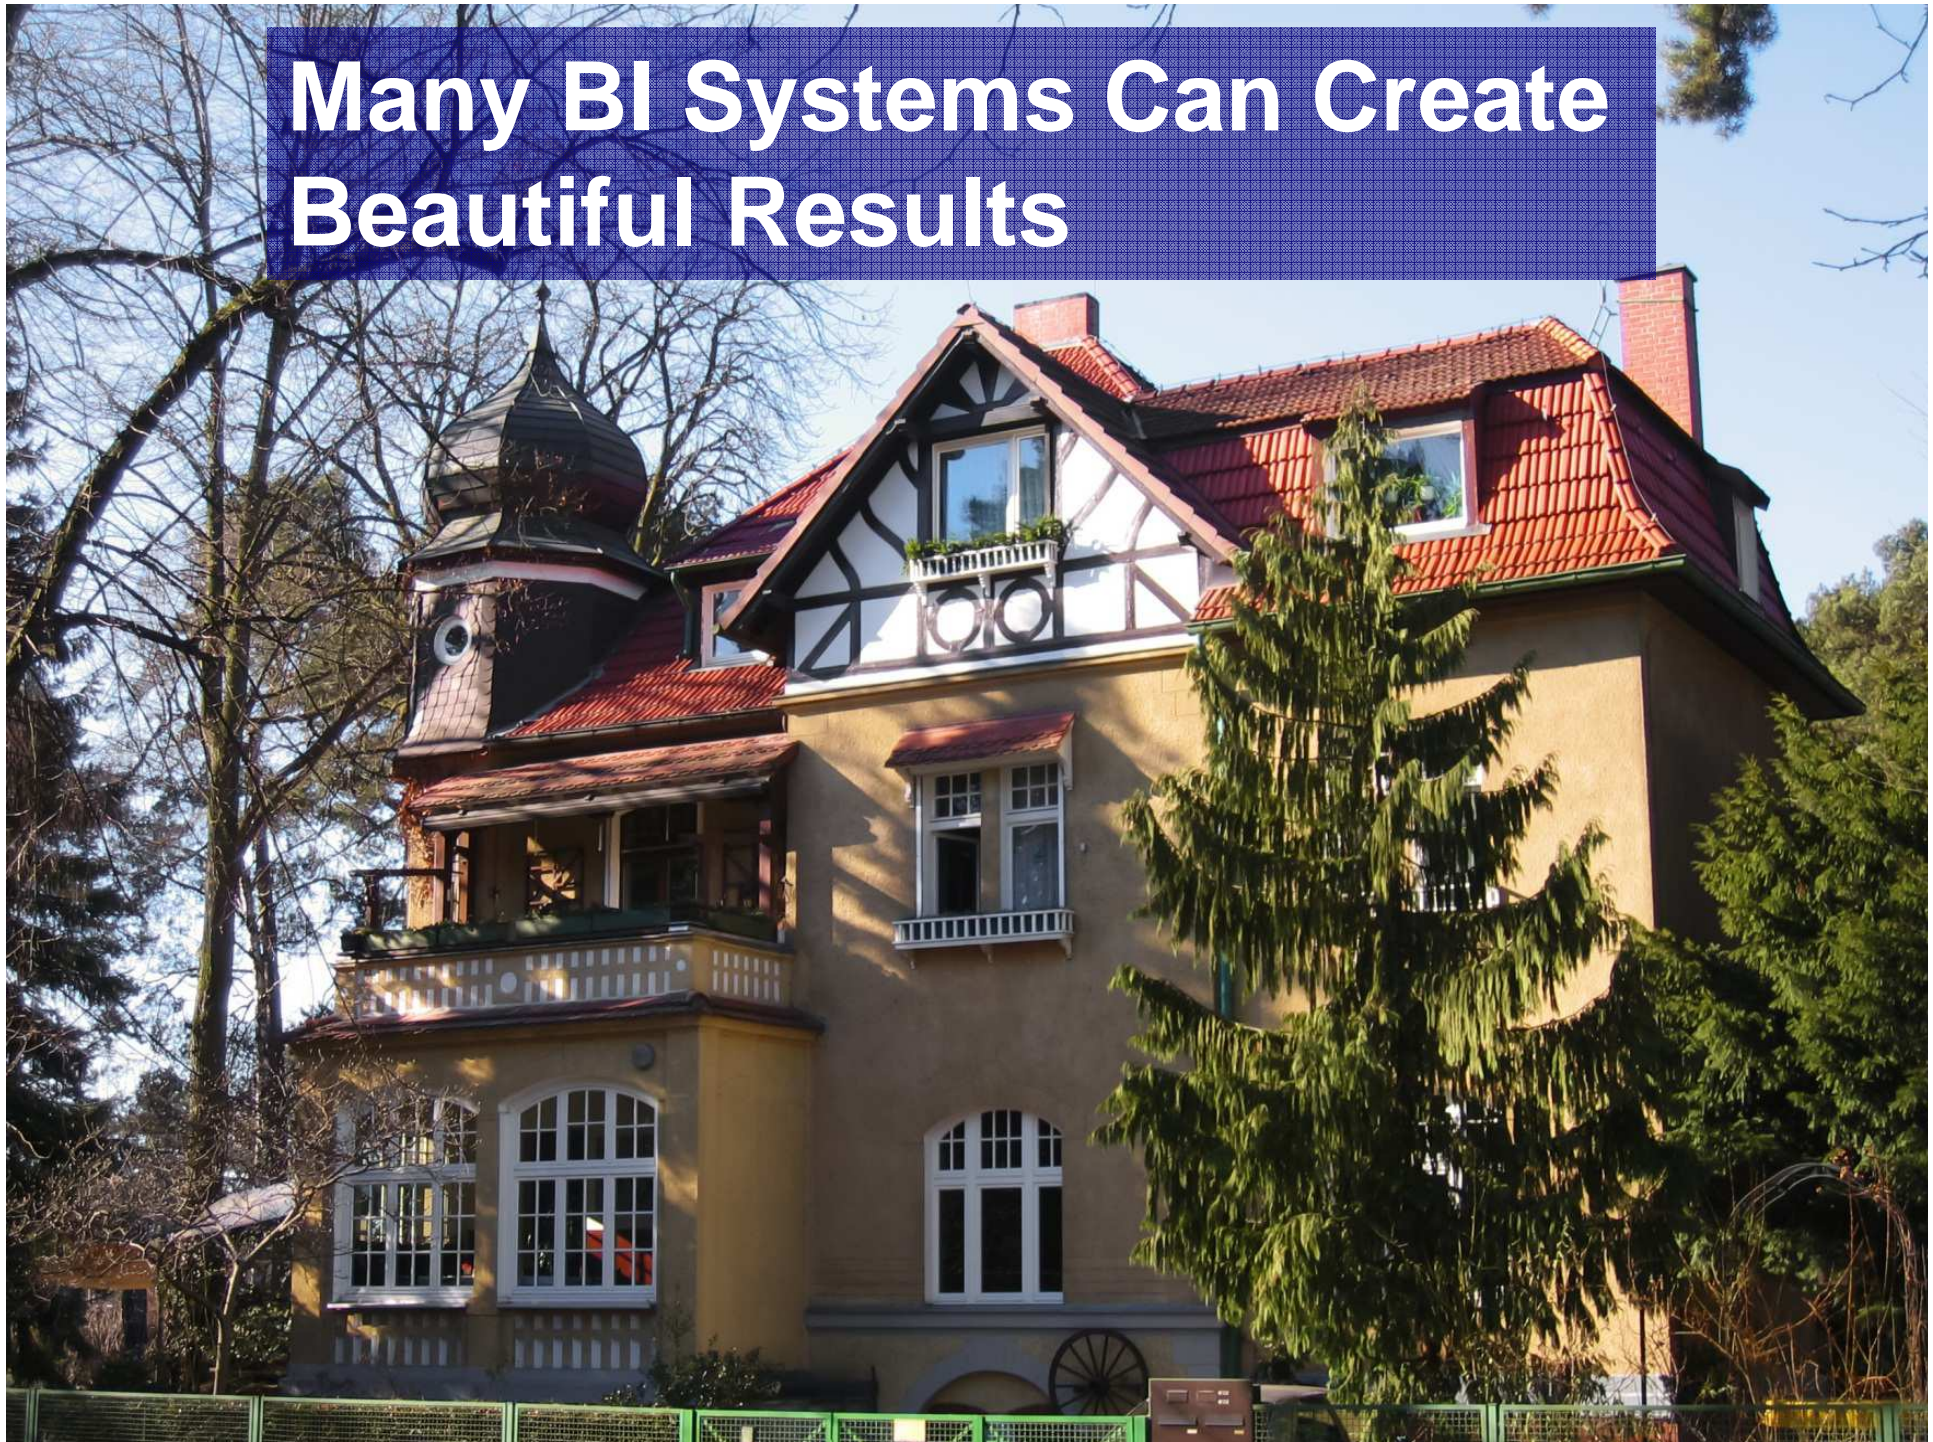

As of February 2012

Highlights from Gartner's BI Magic Quadrant Report 2012

- BI and Analytics named as “Top Priority” for 2012
- “Organizations continue to turn to BI as a vital tool for smarter, more agile, and efficient business.”
- ❖ OBI has highest aggregate “Ability to Execute” score.
- ❖ Broadest global deployment score
- ❖ Average user population nearly 3000
- ❖ Average data volumes nearly 5 Terabytes
- ✗ Below average complexity scores (mostly used for static reporting)
- ✗ Below average ease of use scores
- ✗ OBI has low “data discovery” score

Many BI Systems Can Create Beautiful Results

**OBI Operates at a
Different Scale**

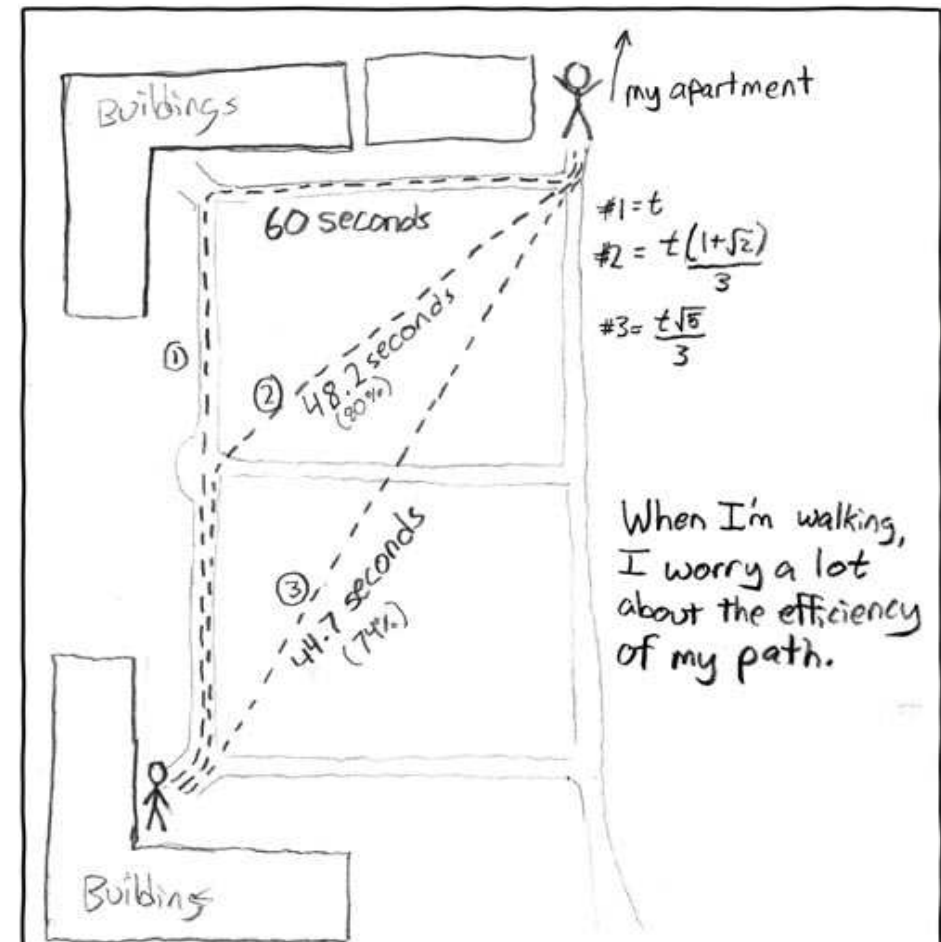

Main Uses of BI Reports & Dashboards

Which Soldier is tallest?

The Spirals are the Same Color

What Attracts Attention

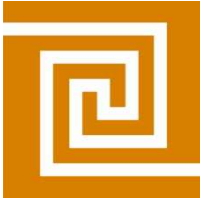

1. Motion

2. Color

3. Size

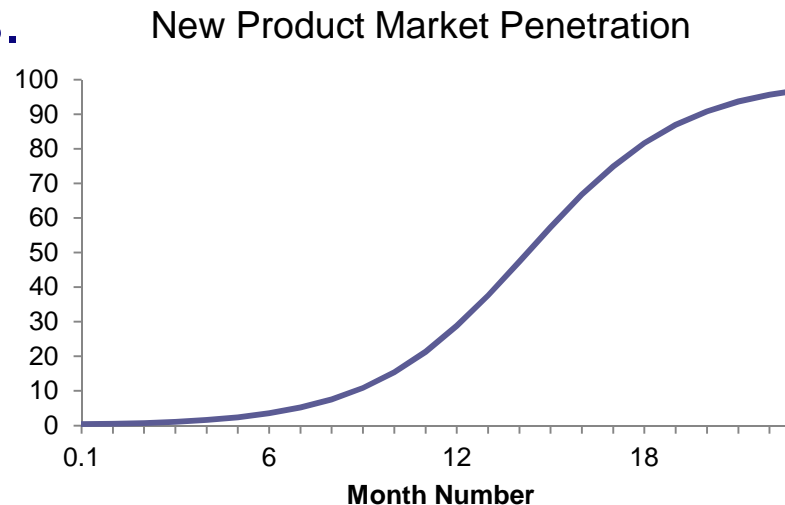

OBIEE Intro Demo

Graphs and Tables

- Graphs and Charts depict visual representations and relationships.

- Tables show data organized for lookup of specific, precise values or items.

District	Month	Dollars	WB Forecast Dollars	% Forecast
ATLANTA DISTRICT	03/01/2008	595,232.0	535,185.0	111.2
BOSTON DISTRICT	03/01/2008	1,882,036.0	1,954,736.7	96.3
CHARLOTTE DISTRICT	03/01/2008	215,360.0	204,592.0	105.3
CHICAGO DISTRICT	03/01/2008	1,381,552.0	1,236,574.0	111.7
CINCINNATI DISTRICT	03/01/2008	827,162.0	742,869.0	111.3
DALLAS DISTRICT	03/01/2008	1,060,316.0	897,654.0	118.1
DENVER DISTRICT	03/01/2008	955,876.0	1,050,735.4	91.0
DETROIT DISTRICT	03/01/2008	961,026.0	1,249,333.8	76.9
JACKSONVILLE DISTRICT	03/01/2008	1,827,434.0	1,892,779.4	96.5

Keys to Effective Tables

- Enable column and row sorting.
- Use appropriate number format.
- Avoid scrolling if possible.
- Lock titles if do use scrolling (BI Publisher)
- Display significant figures.
- Judiciously use conditional formatting for data exploration.
- Avoid putting text in color.
- Alignment, proximity, contrast.

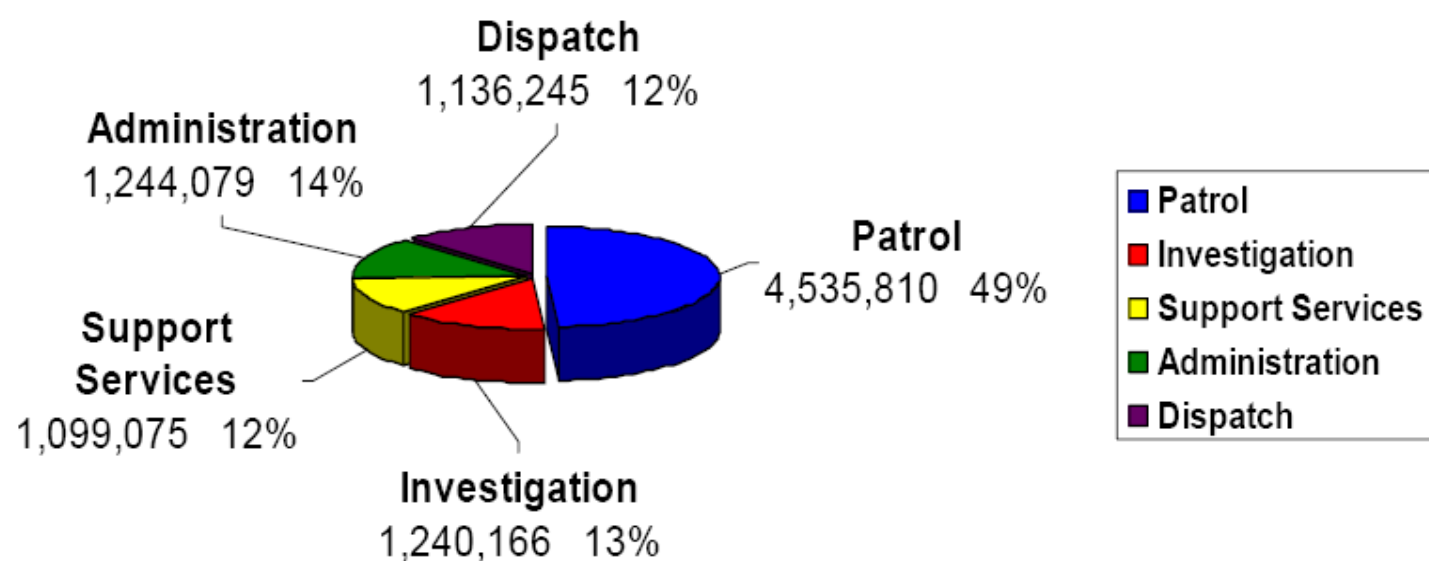

Keys to Effective Graphs

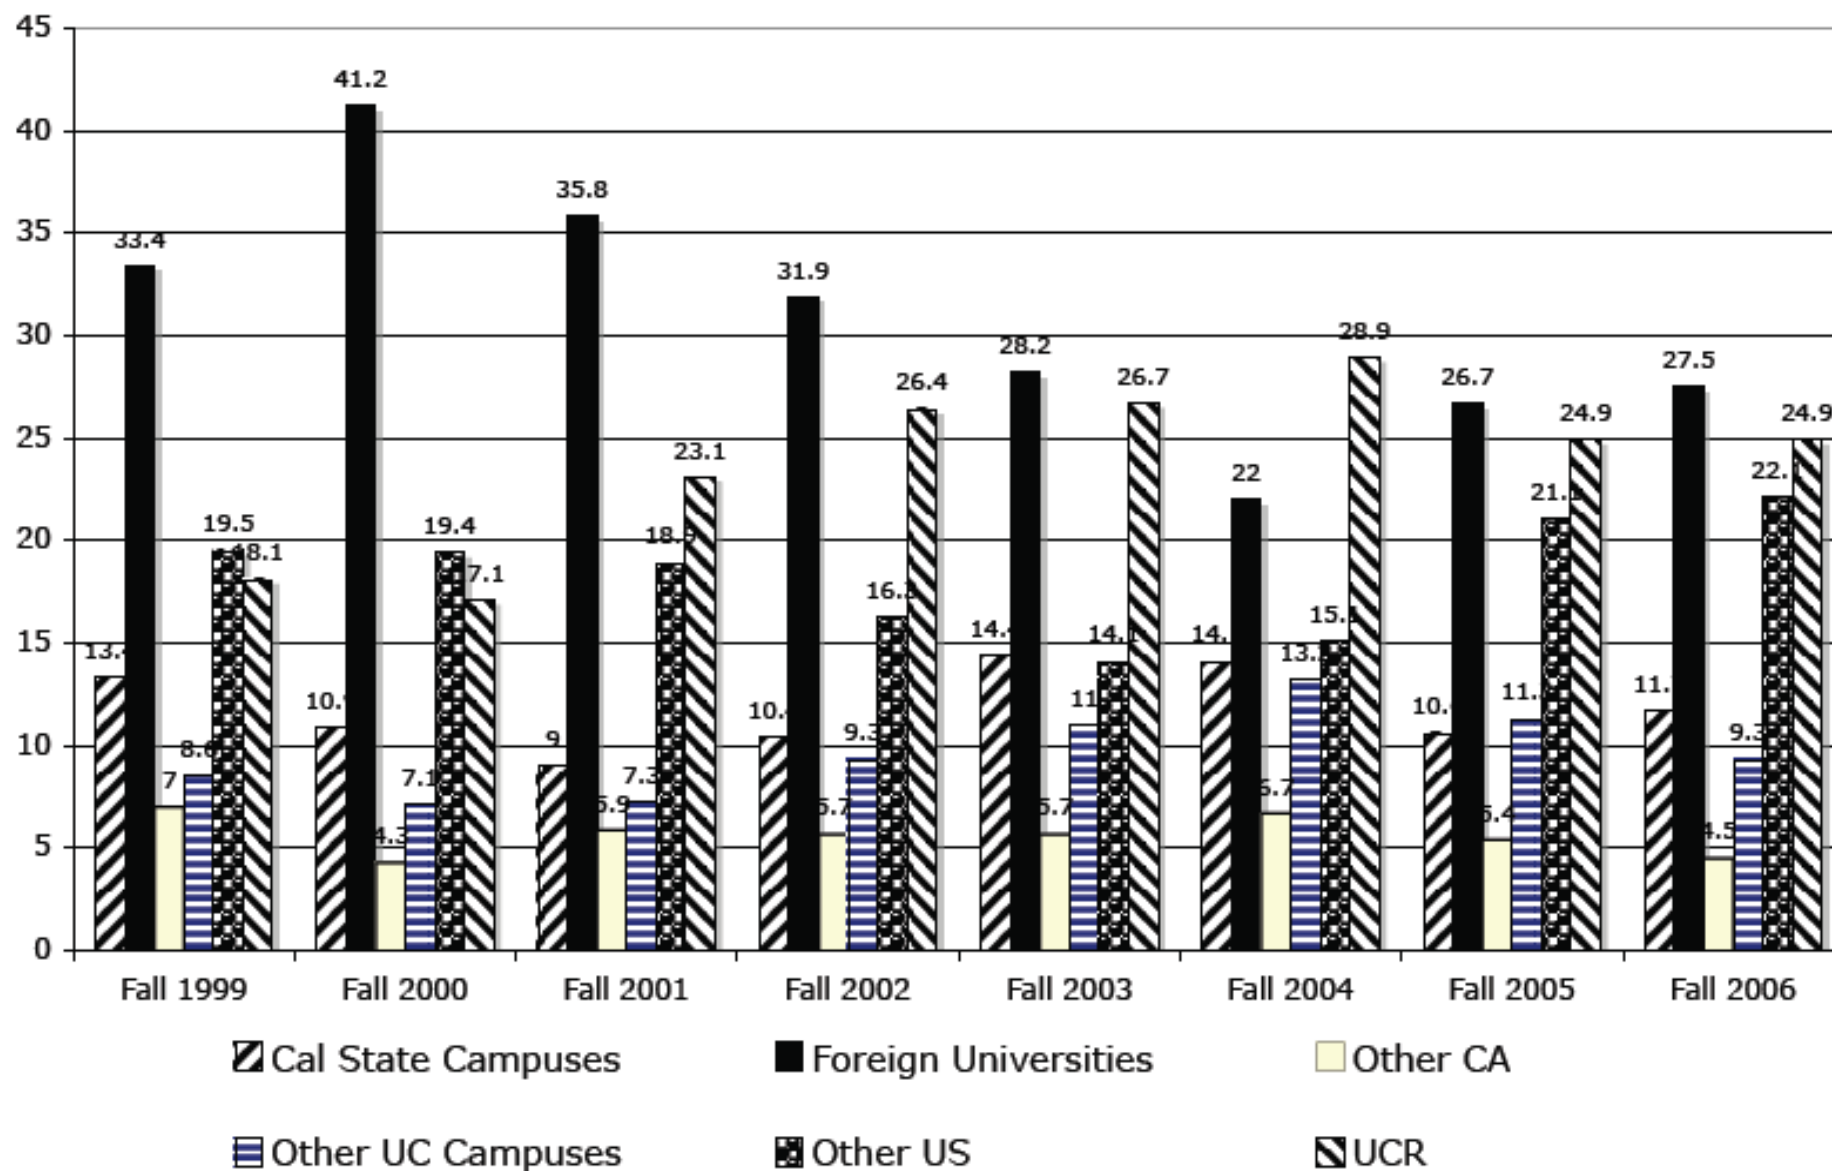

- Do not use 3-D effects.
- Avoid “stop light” color palette.
- Prefer pastel color palettes.
- Avoid bright colors.
- Do not use round gauges or dials.
- Eliminate gridlines, drop shadows, and other graphics.
- Enable interaction for “exploration” graphs
- Prioritize a single message for “explanation” graphs
- Alignment, proximity, contrast.

2004 - 2005 Budget

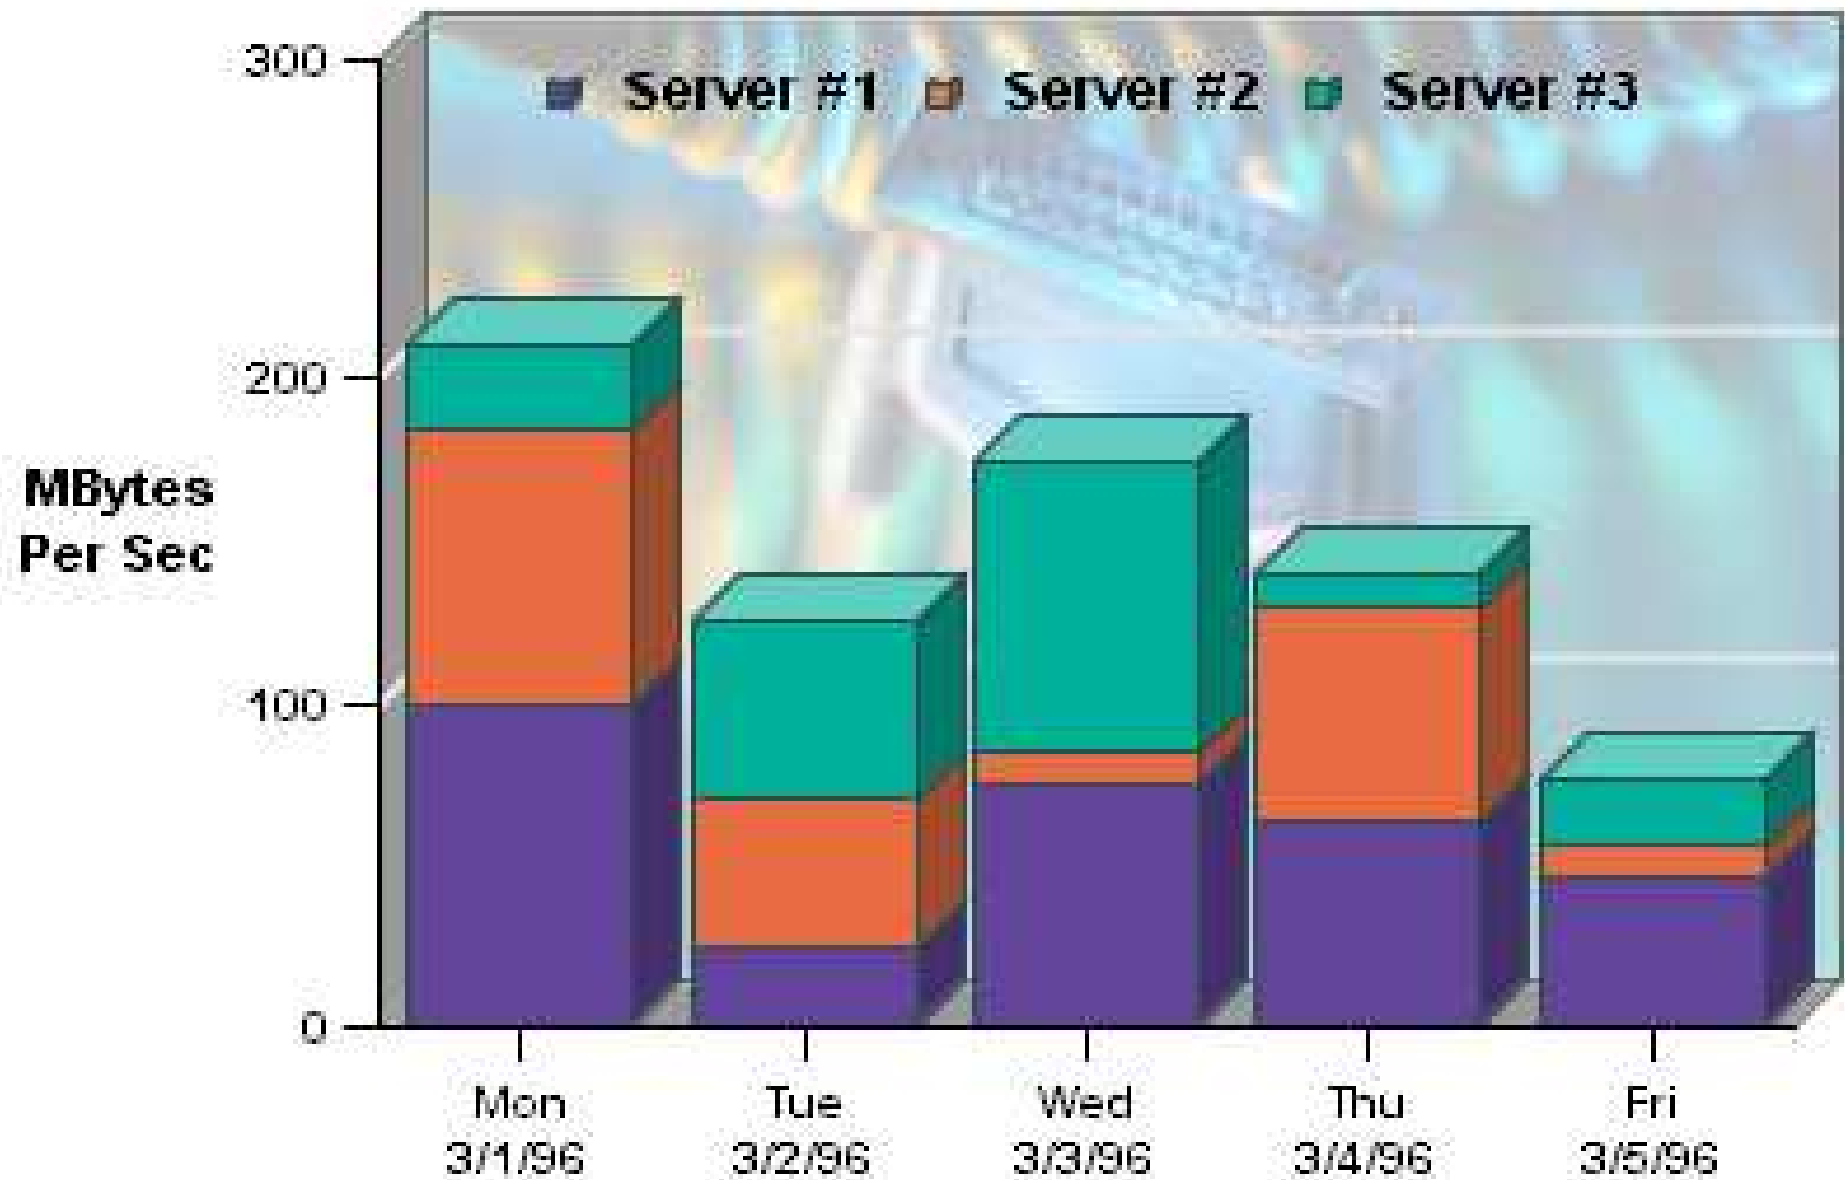

Budget By Division

Baccalaureate Degree Institutions of New Graduate Students- Fall Quarters- Percentages from Type of Institution

Using Color Effectively

- Consciously choose a color palate.
- ColorBrewer2.org
 - Sequential schemes 
 - Designed for ordered data that progresses from low to high.
 - Divergent schemes 
 - Place equal emphasis on mid-range values and extremes at both ends of the data range.
 - Qualitative schemes 
 - Used for nominal and categorical data where magnitude differences between classes should not be emphasized.

OBIEE Dashboard Best Practices

- Content is customized.
- Design is standardized.
- Selection and transformation of data is transparent.
- Dashboards are consciously designed and optimized for effectiveness.

OBIEE Demo

Trellis Charts

- Trellis Layout of Smaller Charts in a grid with Consistent Scales
- Great for finding structures / patterns in complex data
- Use 2D Layout to View Multidimensional Data (like a timeline –*mental animation*)

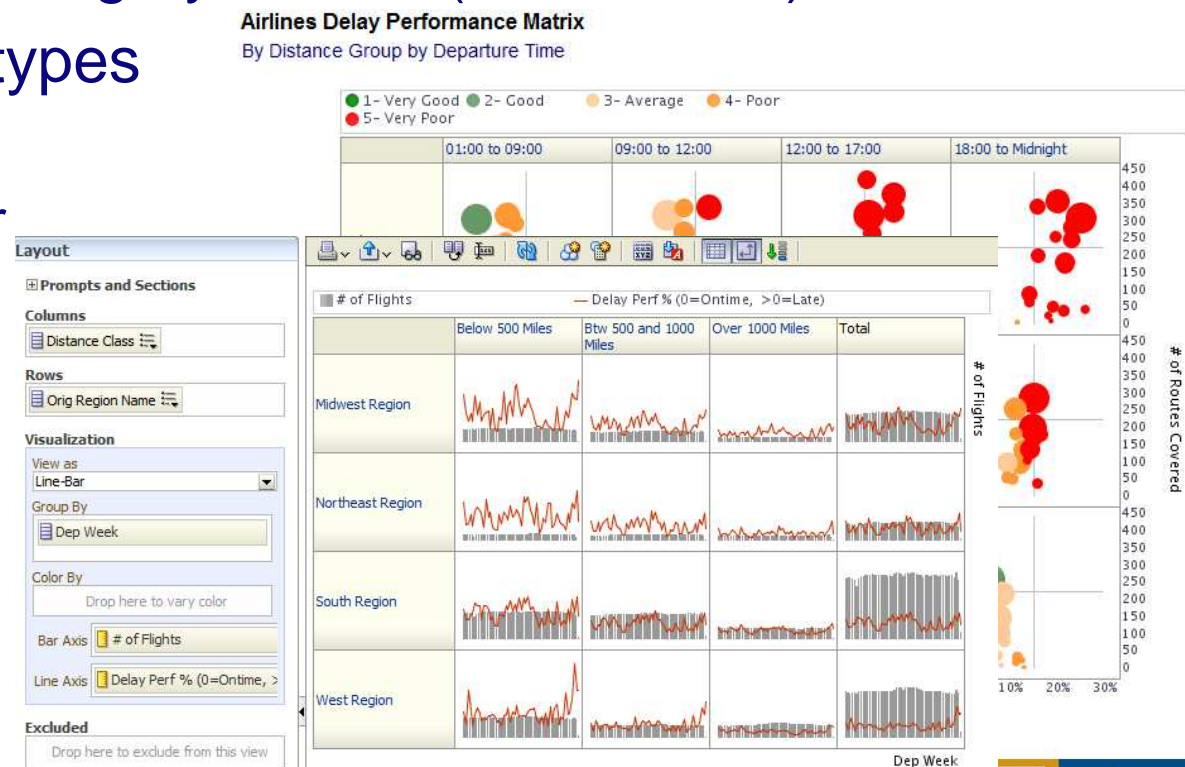

Trellis View - Simple

- Single type of inner visualization
- Common synchronized scale across all graphs
- Has scale showing by default (can turn off)
- Lots of graph types

- Vertical Bar
- Horizontal Bar
- Line
- Area
- Line-Bar
- Pie
- Scatter
- Bubble

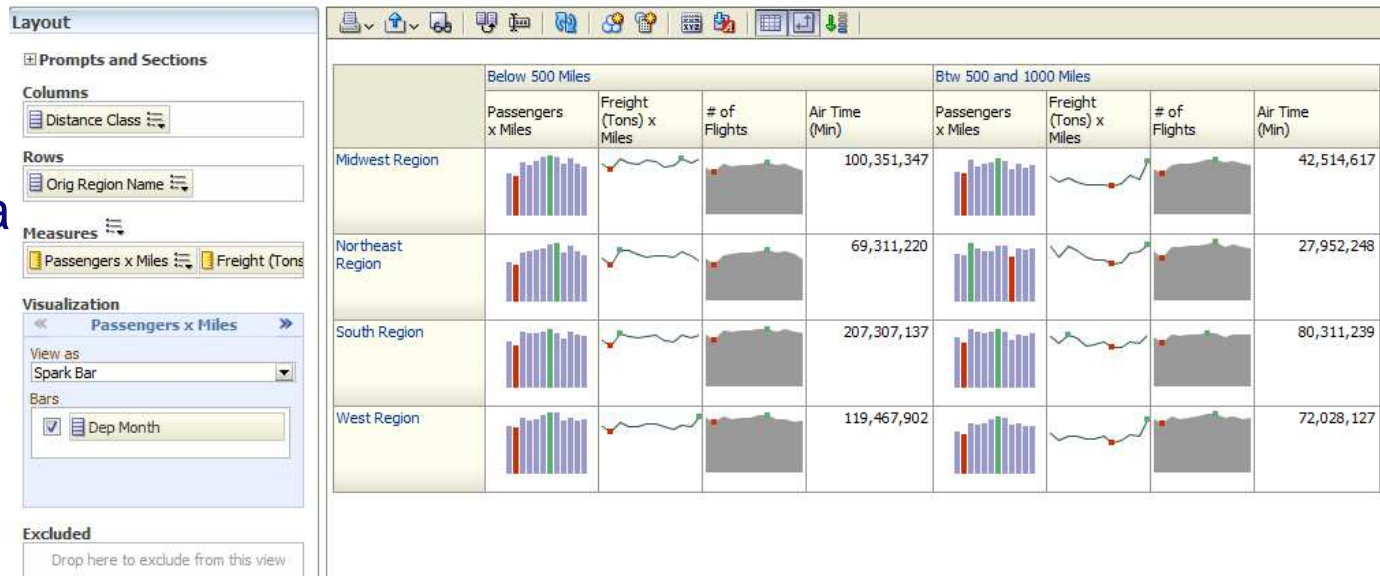

Trellis View - Advanced

- Pivot table with numbers or graphs in cells
- Each microchart has its own scale and not shown
- Most often used to see trend lines
- No axis description, so across should be time
- Can have different visualizations for different measures

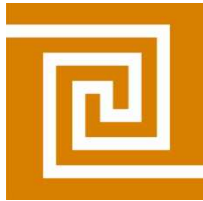

- Spark bar
- Spark line
- Spark area
- numbers

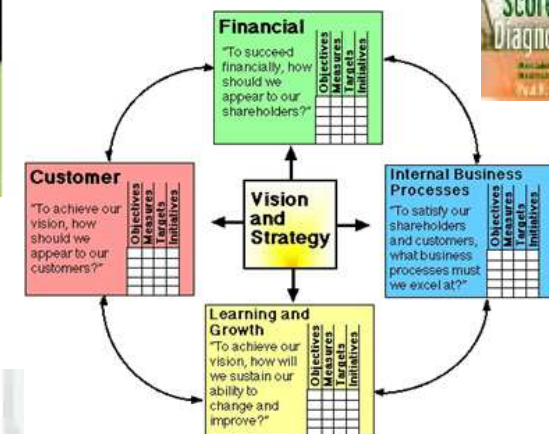

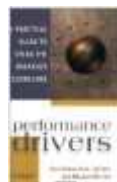

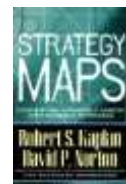

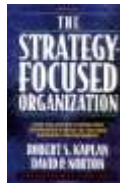

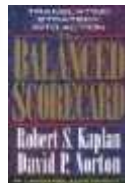

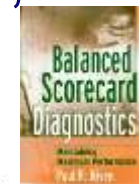

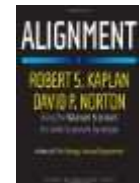

New Trellis Views

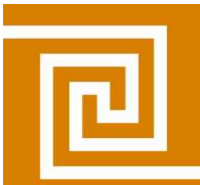

- Does not require Exalytics but need fast Pres Server
- Can display LOTS of data in compact form
- Capable of dense visualizations
 - Great for snapshot of trending
 - Great for comparing patterns across dimension values
- Two types
 - Simple (shows full graphs per cell)
 - Advanced (sparklines – no scales per cell, separate scales)
- Need to think what you're trying to show on a trellis

OBI Scorecard & Strategy Management

- Integrated toolset in OBIEE
- Follows “Balanced Scorecard” methodology
- Enables corporate goals and objectives to be monitored and managed
- Includes strategy maps, strategy trees, KPI watch lists, and cause and effect maps

New Contribution Wheel Visualization

Strategy Tree View

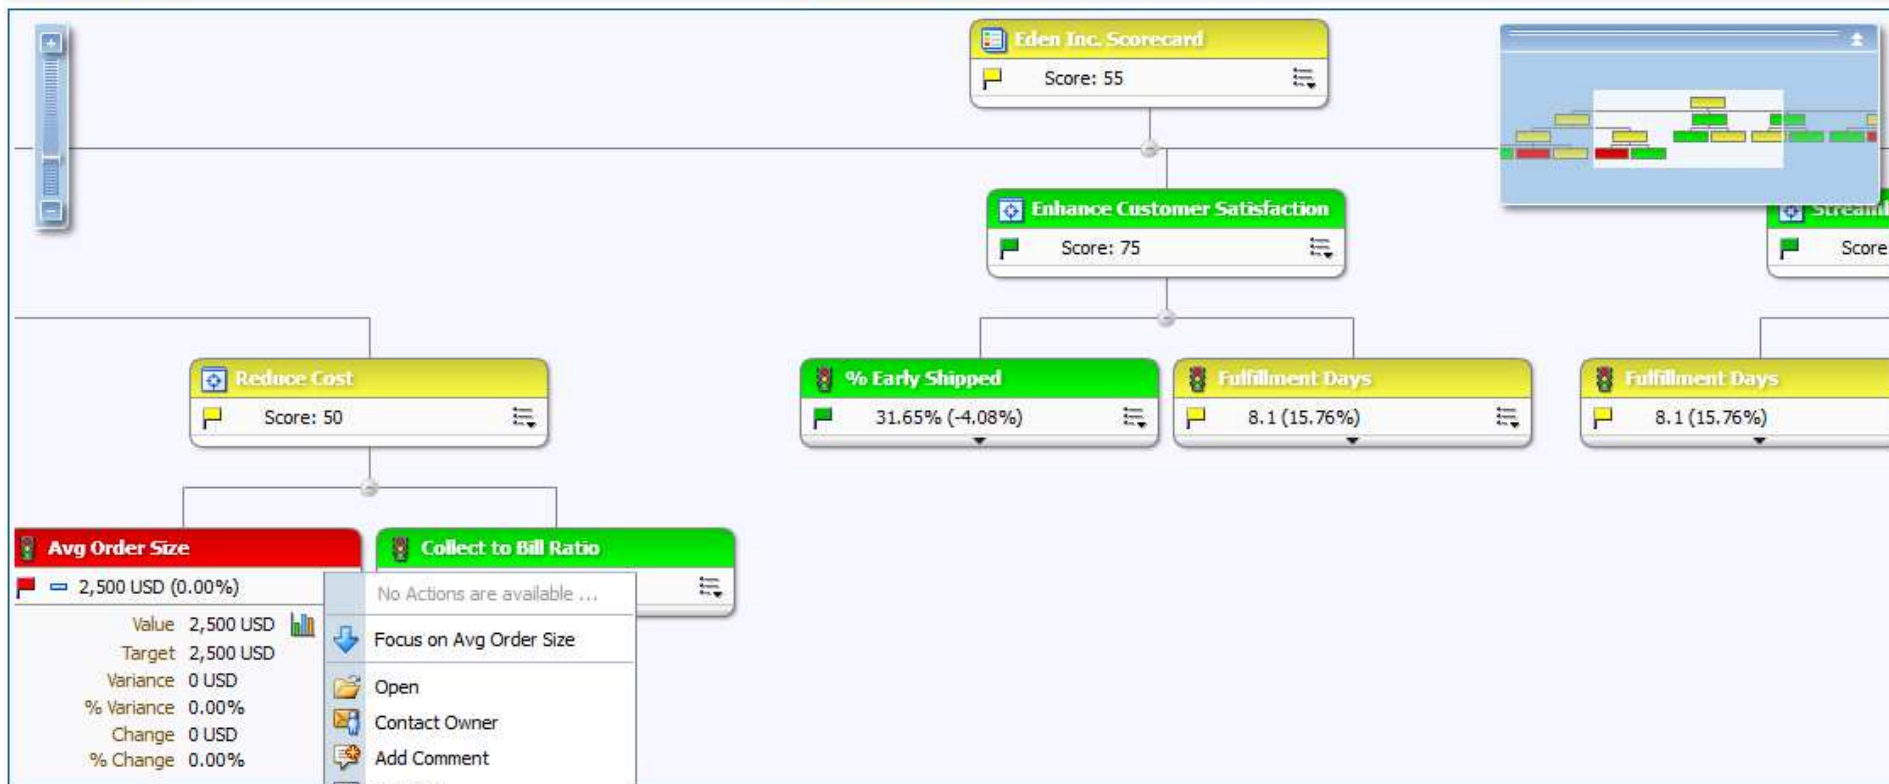

5.1 Scorecards

Home Catalog Favorites Dashboards New Open Signed In As weblogic

Humans Think Spatially

Why Maps are Powerful

What is Spatial Data?

- Business data that contains or describes location
 - Street and postal address (customers, stores, factory, etc.)
 - Sales data (sales territory, customer registration, etc.)
 - Assets (cell towers, pipe lines, electrical transformers, etc.)
 - Geographic features (roads, rivers, parks, etc.)
- Anything connected to a physical location

When Are Map Views Useful?

- Visualizing data related to geographic locations.
- Showing or detecting spatial relationships and patterns.
- Showing lots of data in a relatively small area.
- Drilling down from a (map) overview to a detailed report, chart, or graph.
- When is location important? Can the dimension be plotted on a map?

Map View Tips

- Think about what scale to use. Different map scales will reveal different patterns and insights.
- Use Variable marker to display two measures on a map at a point – size and color.
- Avoid overlapping shapes too much.
- Be aware of spatial distortions E.g. Texas is larger than Connecticut.
- Look at color palette. www.colorbrewer2.org

Map Definitions

- **FEATURE**
 - Provide a spatial context: cities, highways, rivers, etc...
 - Features of Interest: store location, postal boundaries, pipelines, etc...
- **STYLE**
 - Define rendering properties for features
 - Can control fill color, border color, line thickness, line style and more
- **THEME**
 - Collection of features
 - Typically associated with a spatial geometry layer
 - County/state boundaries, major highways, etc...
- **BASEMAP**
 - A grouping of themes to create a map
 - Maps can share themes
 - When associating a theme with a map, can specify min scale and max scale (sometimes known as zoom control)
- **MAP**
 - Basemap with additional themes overlain

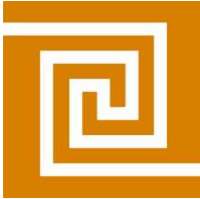

Map Interactivity in OBIEE 11g

- Display BI data on top of maps
 - Color fill
 - FOI point display
- Interact with other Dashboard Elements
 - Drive map content with dashboard prompts
 - Drive map content through drilling and navigation
 - Drive other dashboard elements through map interactions
- Reveal additional information on maps through mouseovers
- Drill to map detail

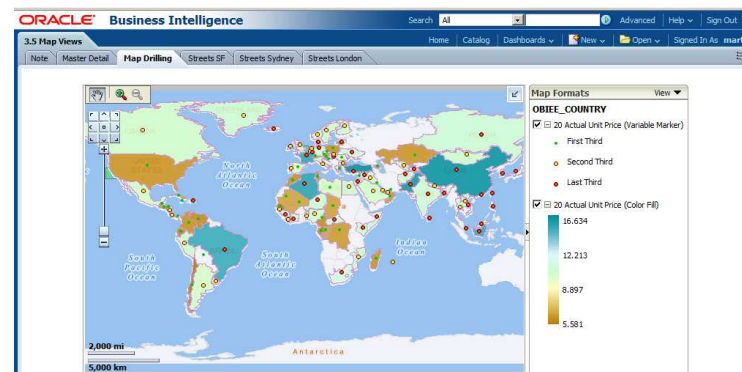

Map View Formats

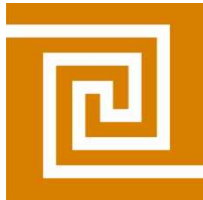

- Color Fill (choropleth)
 - Percentile, Value, Continuous binning
 - Dashboard user run-time slider
- Graphs – Bar, Pie
 - Adjustable graph size
 - Series by second dimension
- Bubble (variable sized)
 - Min-Max size specification
 - Color specification
- Variable Shape
 - Circle, Triangle, Diamond
 - Customizable
- Image
 - Imported via MapViewer
 - More can be added from MapBuilder
- Custom Point Layer
 - Uses Lat / Long
 - Does not require a Layer Def

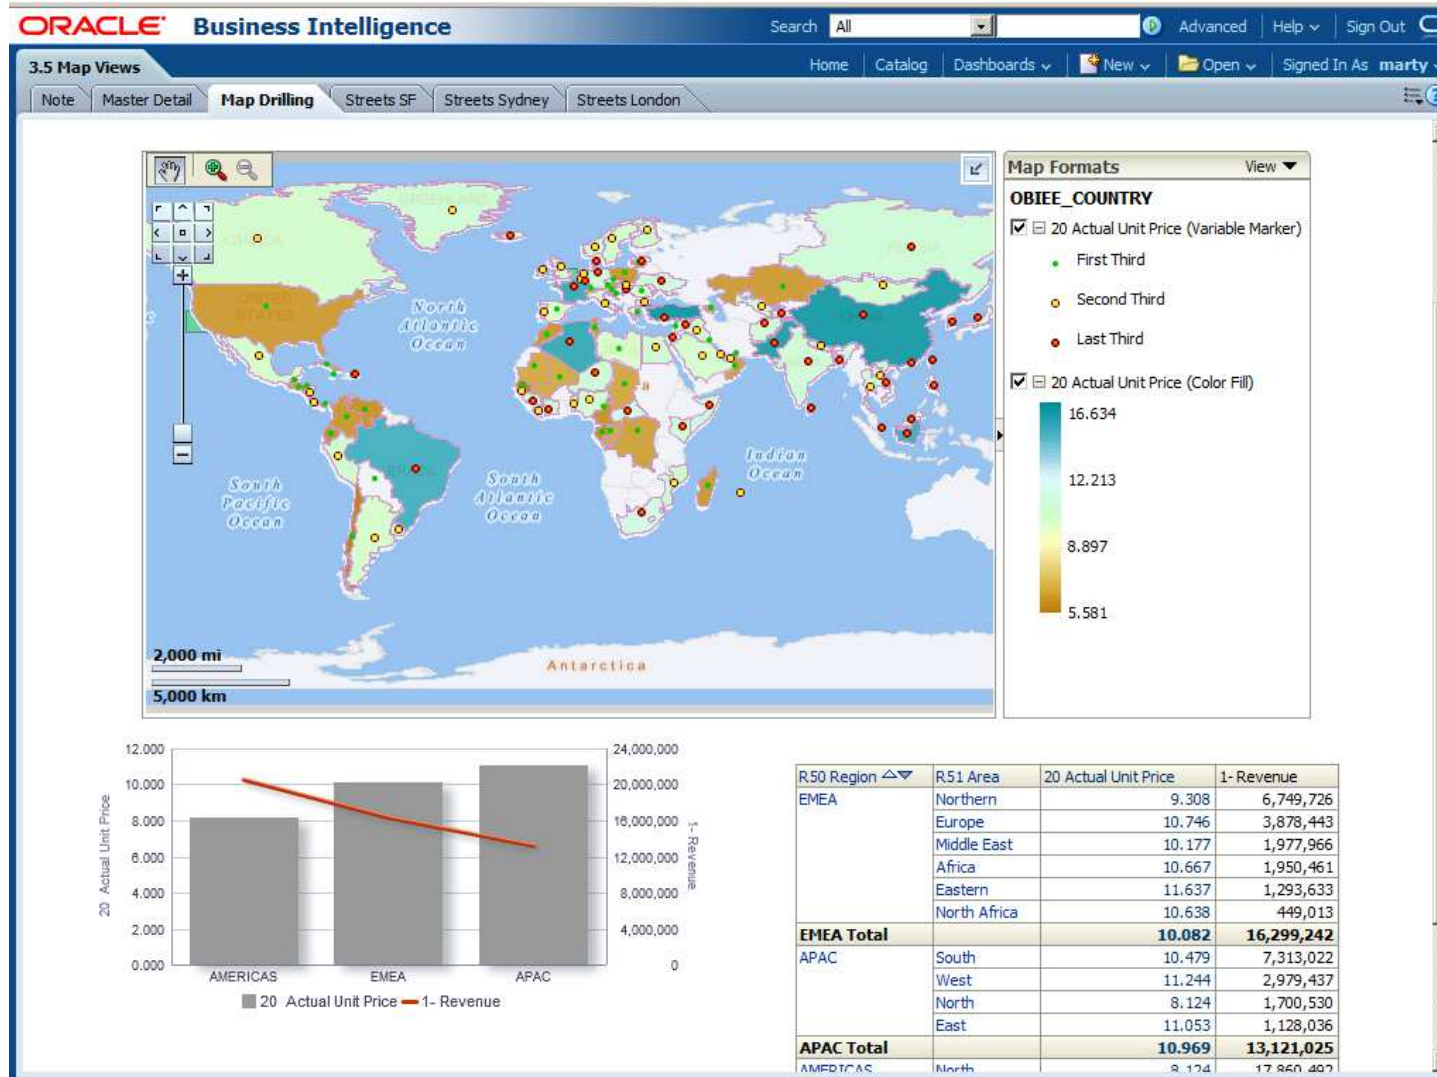

NAVTEQ Data

- NAVTEQ is the leading global provider of digital map, traffic and location data that enables navigation and location-based platforms around the world.
- NAVTEQ data is licensed direct or through a reseller.
- Licenses are use specific.
- NAVTEQ data resides inside your own Oracle Database.
- NAVTEQ publishes an ODF (Oracle Data Format) version of its data designed specifically for use in an Oracle Database.

Demo of Oracle BI 11g Maps

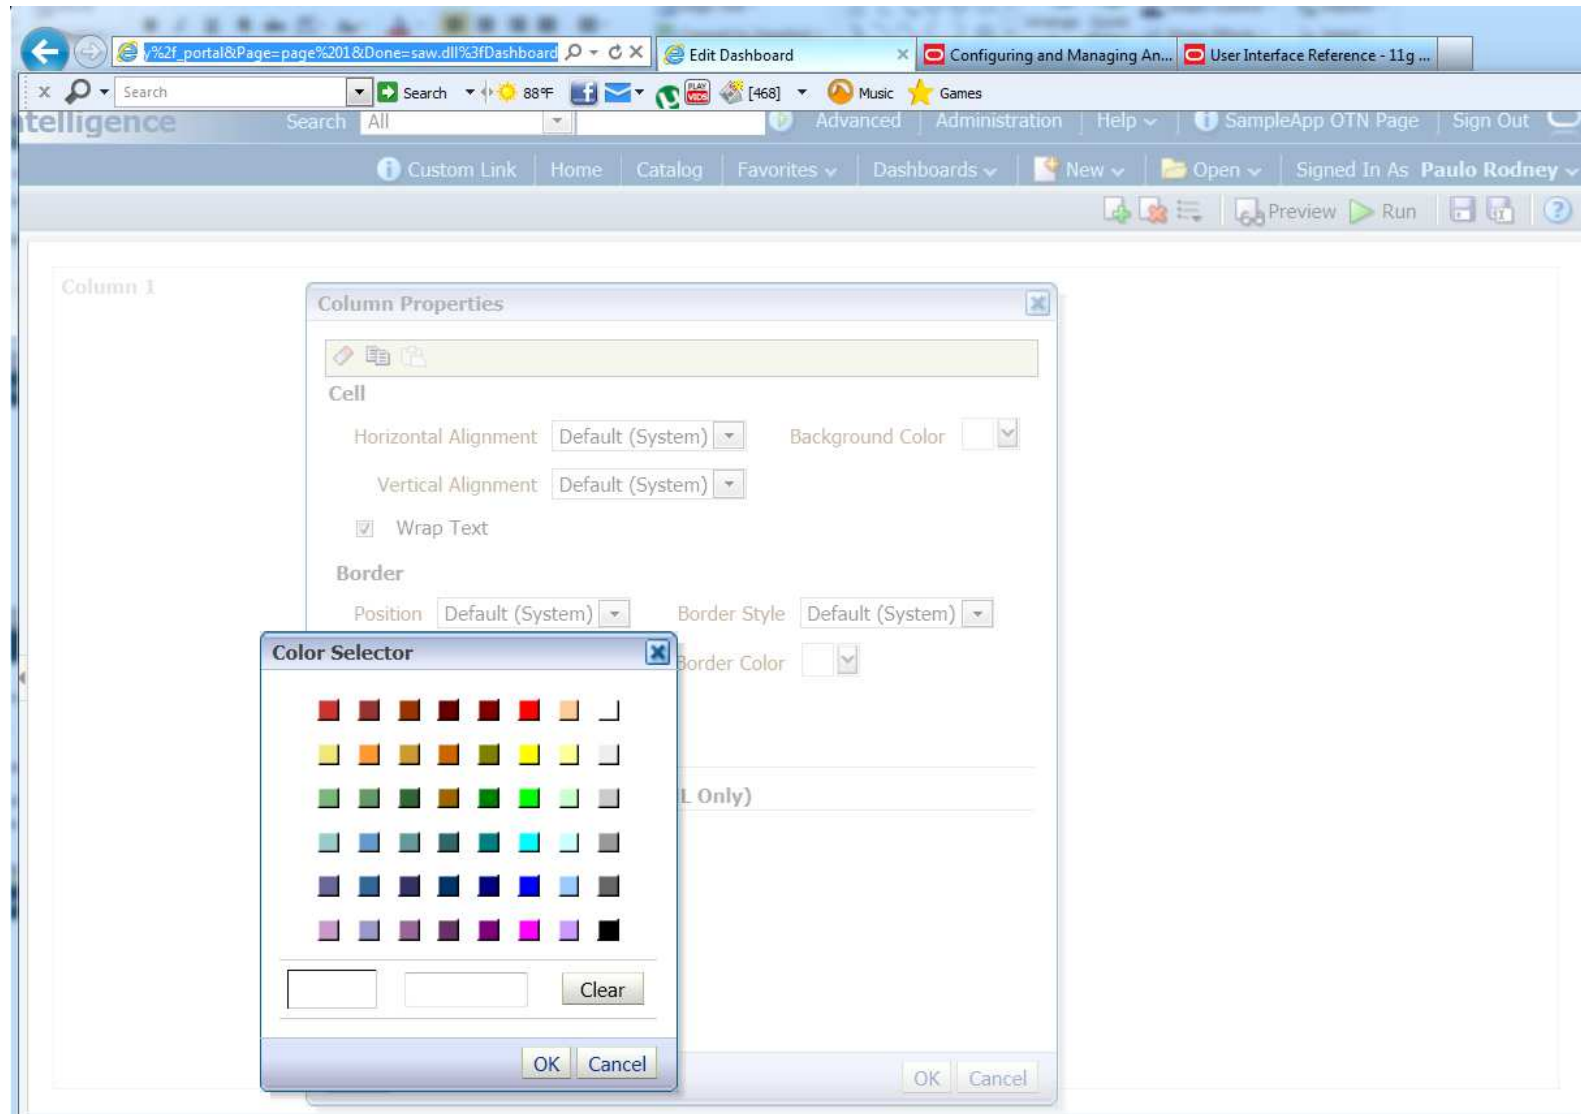

Customizing OBI

- Why?
 - Many of the visuals in OBI contribute to the look and feel and *effectiveness* of your dashboard
 - Branding Elements
 - Customization for different analyses
- How?
 - Two aspects:
 - Personalization directly from the Browser
 - Chart types / Colors
 - Dashboard Look and Feel
 - Skinning and Styling by Altering Configuration Files
 - Change Logos
 - Alter the color and style of elements

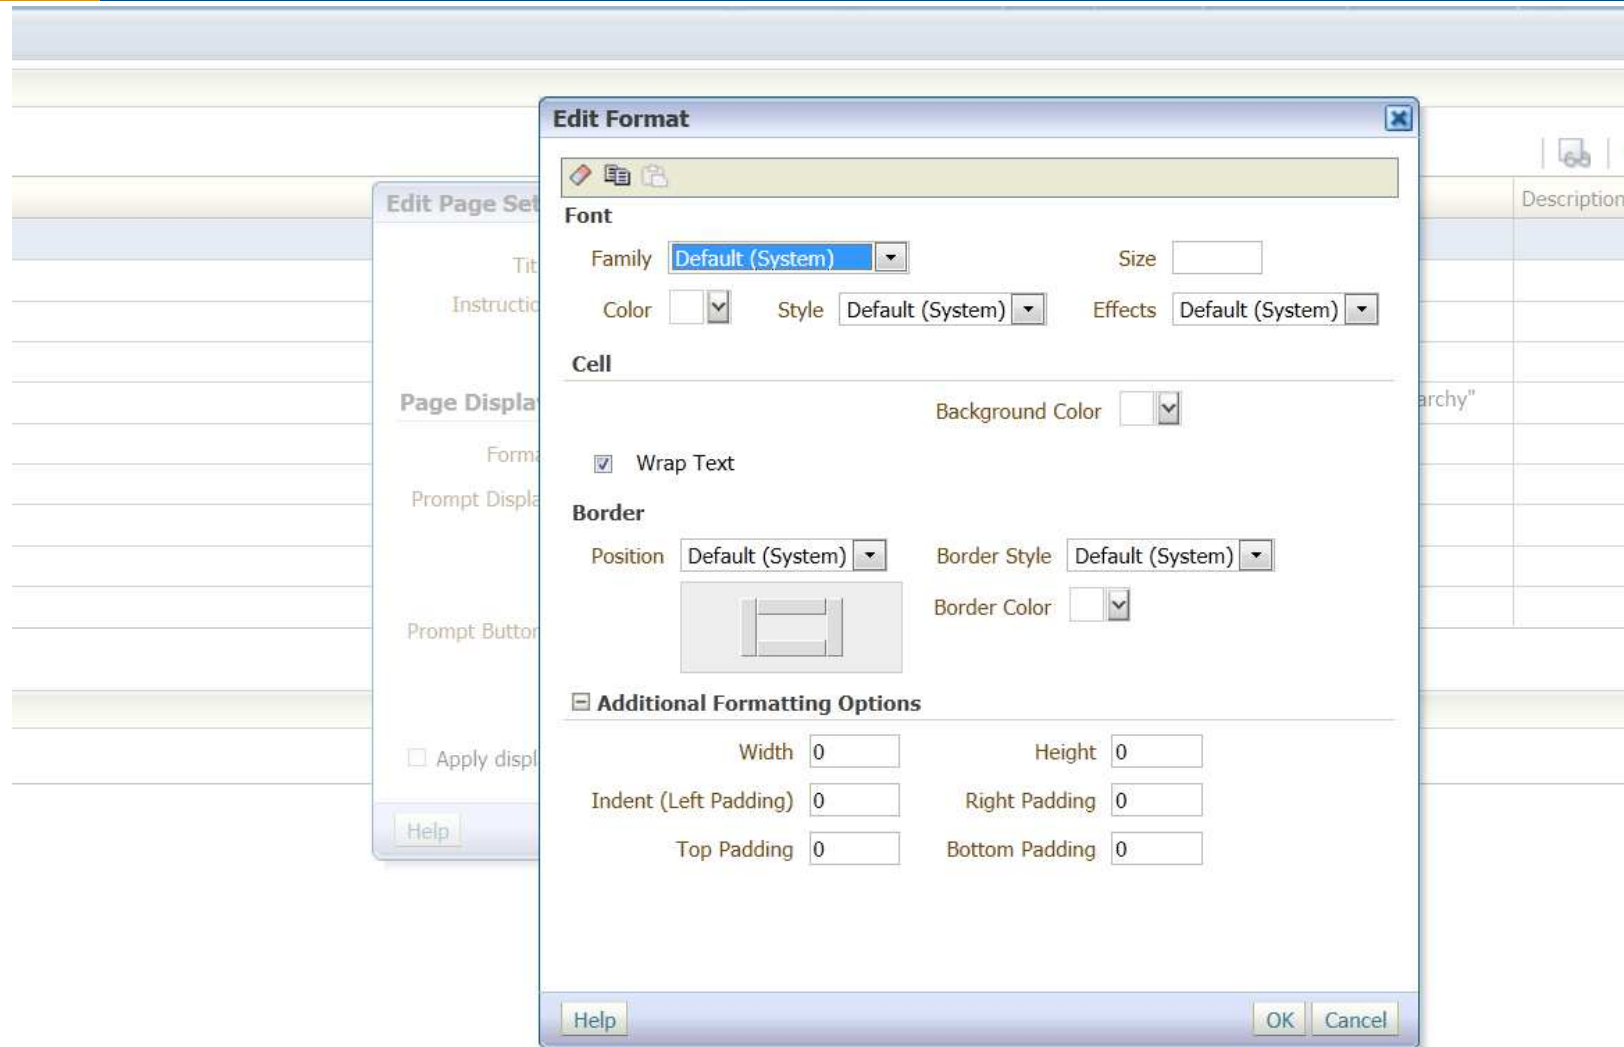

Customizing from the browser

Customize Existing Dashboard Pages

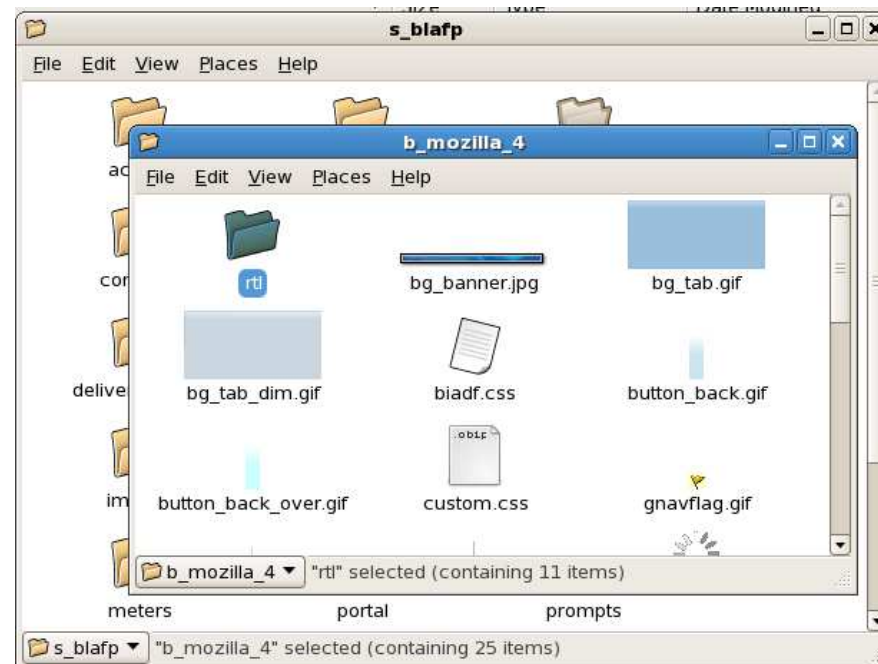

Customizing Skins and Styles

NOTE: Don't attempt this without proper research and always **BACKUP your original directories**

- Two directory trees of interest:

s_blafp (styles) --*actual location may vary by installation*

\$BI_HOME/Oracle_BI1/bifoundation/web/app/res/s_blaf/...

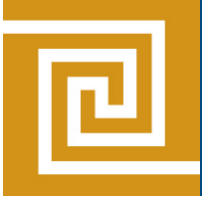

Customizing Skins and Styles

- You can also set an env. variable
- Two directory trees of interest:
 - sk_blafp (skins) *--actual location may vary by installation*
\$BI_HOME/Oracle_BI1/bifoundation/web/app/res/sk_blafl/...

Copyright © 2012, VlamiS Software Solutions, Inc.

Overview of Steps (read the whitepaper)

- Locate and BACKUP the s_blafp / sk_blafp directories
- Rename the “s_<name>” and “sk_<name>” directories for your mods
- Update the **instanceconfig.xml** with your “<name>”
example:
<UI><DefaultSkin>name</DefaultSkin></UI>
<UI><DefaultStyle>name</DefaultStyle></UI>
- Make modifications to the images and .css files in your sk_<name> directory
- Once complete. Restart the Oracle BI Presentation Services and clear the browser cache to see the changes

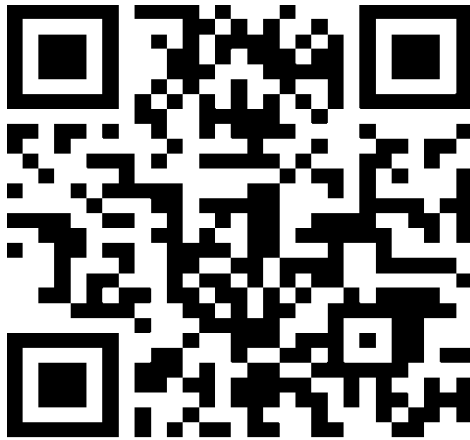

Want to get your hands dirty? Take the OBIEE Test Drive (free)

- Hosted on Amazon Web Services Cloud (AWS)
- Full *dedicated* OBIEE environment with a hands-on lab
- Provisioned within minutes of request
- Available for 5 hours before shutting down
- You access this with Remote Desktop (RDP)
- Tool to support –
 - Experimentation
 - Education
 - Evaluation
 - Demonstration
 - MicroPOC
