Abstract

Many organizations encounter situations where they have report requirements that simply cannot be achieved with the built-in functionality of Oracle Business Intelligence (OBI), including Oracle Analytics Cloud (OAC).

However, OBI provides the functionality to integrate your data with JavaScript libraries such as D3 to create custom interactive visualizations in Answers, Data Visualization, and Data Visualization Desktop.

This session will show you examples of what is possible based on real-life business cases using freely available open source libraries such as D3.

We will also discuss the steps for integrating external libraries with OBI, and provide an overview of what libraries are available to create custom visualizations.

“Best Practice”

- Attitude of IT is often bend the organization to the software under the guise of “best practice”
- Don’t customize
- Change business processes to conform with software
- Sometimes organizations have a need for visualizations that don’t come out of box

Scenario

Copyright 2004 by Randy Glasbergen.
www.glasbergen.com

“I want you to find a bold and innovative way to do everything exactly the same way it’s been done for 25 years.”

Scenario

- We have a report that is manually prepared for 100's of areas
- The report is an industry standard way of looking at something
- There isn't a way to create the visualization with OBI out of the box
- There is significant potential time savings if the report can be automated
- Not even a slight chance you will convince operations to change report and you might be fired for even suggesting it

Give Them What They Want

Let's not throw the baby out
with the bath water.

Use What We Have

What do we have with OBI

- Data
- Metadata
- Connectivity
- Delivery
- Security
- Scalability
- Extensibility
- Familiarity
- Missing - the thing

How do we get the rest of the way?

- Step 1 - Make what we need available
- Step 2 - Create an analysis to make data available
- Step 3 - Create what we need

Where do we get what we need?

Step 1 - Making Libraries Available

- Three possible approaches
 - **Scenario 1 – I have control of my OBI server or the person who does is reasonable and will do stuff if I ask them to and therefore I can put files on my OBI server and deploy the analyticsRes directory.**
 - **Scenario 2 – You can reference links outside your corporate firewall**
 - **Scenario 3 – Nobody trusts you or it's just too painful and I wanna do it right now!**

Scenario 1 - I have control of my OBI server

Place files on file system and deploy directory as application (analyticsRes)

```
[oracle@demo analyticsRes]$ ls
assets                conditionalfmt  d3-cloud      libraries      pdf            s_MobileDarkStyle
baseline_validation   customMessages d3v4           mad            SampleApp      s_MobileStyle
bubbletea             d3            d3v4_2        META-INF       sk_MobileDarkStyle WEB-INF
cleanup-r-imgs.sh     d3_2          dynamic_images ojet-demo      sk_MobileStyle
[oracle@demo analyticsRes]$ cd libraries/
[oracle@demo libraries]$ ls
d3  jQuery  jquery-ui-1.12.1  pdfkit  sampleapp  select2-master  svg2pdf  w3
[oracle@demo libraries]$ cd d3
[oracle@demo d3]$ ls
d3.js  d3.min.js  d3-scale-chromatic.js  d3-scale-chromatic.min.js  LICENSE  README.md
[oracle@demo d3]$ pwd
/app/oracle/biee/user_projects/domains/bi/custom_wls_apps/analyticsRes/libraries/d3
[oracle@demo d3]$
```

Scenario 3 – I wanna do it right now!

Copy paste library code to a text area on your dashboard

The screenshot shows the Oracle Analytics Cloud interface. On the left, the 'D3Demo' dashboard is visible with a sidebar containing various components: Column, Section, Alert Section, Action Link, Action Link Menu, Link or Image, Embedded Content, Text, and Folder. The 'Text' component is highlighted with a blue arrow. In the center, a 'Text Properties' dialog box is open. It has a title bar with a question mark and a close button. The main text area contains the following code: `<script>
// https://d3js.org Version 4.10.2. Copyright 2017 Mike Bostock.
(function(t,n){"object"==typeof exports&&"undefined"!=typeof module?
n(exports):"function"==typeof define&&define.amd?define`. Above the text area are buttons for bold (B), italic (i), underline (u), and line break, along with a checked checkbox for 'Contains HTML Markup'. A blue arrow points to the 'i' button, and another blue arrow points to the text area. At the bottom of the dialog are 'OK' and 'Cancel' buttons.

Step 2 - Create an analysis

Create a narrative view to pump data into JSON

Format:

Prefix –

```
<script>
```

```
var myVar={};
```

```
myVar.data=[];
```

Narrative -

```
myVar.data.push({"col1":@1,"col2":@2});
```

Postfix –

```
//do something with myVar.data
```

```
</script>
```

Step 2 - Create an analysis

length: 27

Step 3 – Create Visualization (1)

The screenshot displays the Vlami software interface, specifically the 'Results' tab. The interface is divided into several sections:

- Left Panel:** Contains a 'Subject Area' tree with folders like 'A - Sample Sales', 'Time', 'Products', 'Offices', 'Sales Person', 'Customers', 'Orders', 'Other Objects', and 'Facts'. Below this is a 'Catalog' section with a 'List' dropdown set to 'All' and folders for 'My Folders' and 'Shared Folders'.
- Top Bar:** Includes tabs for 'Criteria', 'Results', 'Prompts', and 'Advanced', along with various icons for data manipulation.
- Compound Layout Editor:** A central workspace with a 'Narrative' section. It features a toolbar with icons for text formatting (bold, italic, underline) and a 'Line Break' button. A checkbox labeled 'Contains HTML Markup' is checked.
- Code Editor:** A text area for writing JavaScript code. It is divided into three sections: 'Prefix', 'Narrative', and 'Postfix'.
 - Prefix:** Contains code for loading D3.js and jQuery:

```
<script src="../../analyticsRes/libraries/d3/d3.min.js"></script>
<script src="../../analyticsRes/libraries/jquery/jquery-3.2.1.min.js"></script>
<script>
var myVar=[];
myVar.data=[];
```
 - Narrative:** Contains a data query:

```
myVar.data.push({"Manager":"@1","SalesRep":"@2","Revenue":"@3"});
```
 - Postfix:** Contains code for creating an SVG element:

```
var mySVG=d3.select("#putstuffhere").append('svg')
.attr("width", '500px')
.attr("height", '500px')
.attr("id", "svgElement")
</script>
<div id="putstuffhere"></div>
```
- Row separator:** A text input field.
- Rows to display:** A numeric input field set to '1000'.
